## PREAMBLE

Dear Students and Stakeholders,

It is with great pleasure and honor to introduce the newly developed autonomous curriculum at the SIES Graduate School of Technology's Department of Computer Science & Engineering (IoT & Cyber Security including Blockchain Technology). This cutting-edge program is designed to equip students with the knowledge and skills required to excel in this dynamic and rapidly evolving field.

The curriculum has been meticulously crafted using a top-down approach. It begins with a well-defined set of learning objectives, followed by content design that aligns with these objectives. The integration of experiential learning through projects, skill laboratories, internships, and industry collaborations is a key feature. Additionally, the program outcomes have been mapped to specific courses, setting the stage for continuous evaluation and improvement. The process starts with stakeholder consultation to identify industry requirements, leading to the introduction of four honors/minor tracks: AIML, Data Science, Augmented Reality and Virtual Reality, and Robotics.

Aligned with the transformative vision of the National Education Policy (NEP) 2020, our program aims to provide students with a comprehensive understanding of core areas like Cyber Security, IoT, and Blockchain Technology. Through multidisciplinary courses, skill labs, and specialized laboratory courses, students acquire the skills needed to tackle complex challenges. Independent laboratory courses teach practical engineering concepts such as Cryptocurrency Technology, Security in Computing, and High-Performance Computing. The curriculum also offers electives in diverse areas like Mobile Security and Penetration Testing, Data Analytics and Visualization, and Natural Language Processing to cater to a broad range of interests.

The autonomous curriculum provides educators with numerous opportunities to innovate and enhance the student learning experience. Collaborations with industry associations are encouraged to enrich the curriculum with relevant projects, internships, and guest lectures. Overall, curriculum autonomy empowers educators to play a significant role in shaping how students learn within the field of Computer Science & Engineering, with a focus on IoT, Cyber Security, and Blockchain Technology.

Our goal is to nurture graduates who are prepared to lead, innovate, and serve as global ambassadors of excellence in IoT, Cyber Security, and Blockchain Technology. By fostering creativity, resilience, and curiosity, we aim to equip them to face the challenges of the digital world, contribute to technological advancements, and play a crucial role in securing our interconnected future. We invite all stakeholders to join us in redefining engineering education as we embark on this transformative journey. Together, let's strive for excellence, innovation, and a lasting societal impact.

@ Physics/Chemistry in one semester.

\* Two hours of practical class to be conducted for full class as demo/ discussion.

# Course evaluation is an activity based which may be an individual or group of students.

\$ ESE of duration 3 hours are of 80 marks and scaled to 60. ESE duration of 2 hours are of 60 marks and scaled to 45.

Theory 1 credit for 1 hour and practical 1 credit for 2 hours.

ISE: In Semester Examination: To be conducted in any of these forms - Assignment/ Quiz/ Presentation/ Class Test etc. of 20/15 marks.

MSE: Mid Semester Examination: To be conducted as written examination for 20/15 marks of duration 1 Hr.

ESE: End Semester Examination

CIAP: Continuous Internal Assessment Practical. Term work will be assessed as Continuous Internal Assessment Practical (CIAP).

ESEP: End Semester Examination Practical. Oral/Practical Examination will be conducted as End Semester Examination Practical (ESEP).

**Pre- requisite:**

1. FEC101- Applied Mathematics I
2. FEC201 - Applied Mathematics II

**Program Outcomes Addressed**

1. PO1: Engineering Knowledge
2. PO2: Problem analysis
3. PO3: Design/development of solutions
4. PO4: Conduct investigation of complex problems

**Course Objectives:**

1. To learn the Laplace transform of various functions and its applications.
2. To learn Inverse Laplace Transform of various functions and its applications.
3. To understand the concept of Fourier Series, its complex form and enhance the problem-solving skill.
4. To understand the concept of complex variables, C-R equations, harmonic functions and their conjugate and mapping in complex plan.
5. To familiarize with the concepts of statistics for data analysis.
6. To acquaint with the concepts of probability, random variables with their distributions and expectations.

**Course Outcomes: Learners will be able to**

1. Apply the properties of Laplace transform to the functions. Describe the various functions of Physical Layer.
2. Determine inverse Laplace transform using convolution theorem and partial fraction method.
3. Construct the Fourier series of periodic functions for real life problems and complex engineering problems.
4. Apply the concept of complex numbers, complex functions, and their significance in data science and engineering.
5. Evaluate the strength and direction of relationships between variables using correlation and Regression techniques.
6. Apply the concepts of probability and expectation for getting the spread of the data and distribution of the data.

| Module No. | Unit No.   |   | Hrs.      | CO         |
|------------|------------|---|-----------|------------|
| <b>1.0</b> |            | <b>Laplace Transform</b>  | <b>07</b> |            |
|            | <b>1.1</b> | Definition of Laplace transform: Condition of Existence of Laplace transform, Laplace Transform (L) of Standard Functions like $e^{at}$ , $\sin(at)$ , $\cos(at)$ , $\sinh(at)$ , $\cosh(at)$ and $t^n, n \geq 0$ .                     |           | <b>CO1</b> |
|            | <b>1.2</b> | Properties of Laplace Transform: Linearity, First shifting theorem, Second Shifting Transform, Change of Scale property, Multiplication by t, Division by t, Laplace Transform of derivatives and integrals (Properties without proof). |           |            |
|            | <b>1.3</b> | Evaluation of integrals for particular value of 's' by using Laplace Transformation.  |           |            |
|            |            | <b>Self-Learning</b> : Heaviside's Unit Step function, Laplace Transform of Periodic functions, Dirac Delta Function.   |           |            |
| <b>2.0</b> |            | <b>Inverse Laplace Transform</b>  | <b>06</b> |            |
|            | <b>2.1</b> | Introduction of Inverse Laplace Transform, Linearity property, Use of standard formulae to find inverse Laplace Transform, finding Inverse Laplace transform using derivatives.   |           | <b>CO2</b> |
|            | <b>2.2</b> | Partial fractions method to find inverse Laplace transform  |           |            |
|            | <b>2.3</b> | Inverse Laplace transform using Convolution theorem (without proof).  |           |            |
|            | <b>2.4</b> | Applications to solve initial and boundary value problems involving ordinary differential equations.  |           |            |
|            |            | <b>Self-Learning</b> : Applications to solve simultaneous initial and boundary value problems involving ordinary differential equations.  |           |            |
| <b>3.0</b> |            | <b>Fourier Series</b>   | <b>07</b> |            |
|            | <b>3.1</b> | Dirichlet's conditions, Definition of Fourier series.   |           | <b>CO3</b> |
|            | <b>3.2</b> | Fourier series of periodic functions with period $2\pi$ and $2l$ .  |           |            |
|            | <b>3.3</b> | Fourier series of even and odd functions (No examples on Parseval Identity)   |           |            |
|            | <b>3.4</b> | Half range Sine and Cosine Series.  |           |            |
|            |            | <b>Self-Learning</b> : Complex form of Fourier Series, Orthogonal and orthonormal set of functions. Fourier Transform.  |           |            |
| <b>4.0</b> |            | <b>Complex Variables</b>  | <b>07</b> |            |
|            | <b>4.1</b> | Function $f(z)$ of complex variable, limit, continuity and differentiability of $f(z)$ Analytic function, necessary and sufficient conditions for $f(z)$ to be analytic (without proof).  |           | <b>CO4</b> |
|            | <b>4.2</b> | Cauchy-Riemann equations in cartesian coordinates (without proof).  |           |            |

|            |            |   |           |            |
|------------|------------|---|-----------|------------|
|            | <b>4.3</b> | Milne-Thomson method to determine analytic function $f(z)$ when real part ( $u$ ) or Imaginary part ( $v$ ) or its combination ( $u+v$ or $u-v$ ) is given. |           |            |
|            | <b>4.4</b> | Harmonic function, Harmonic conjugate and orthogonal trajectories.  |           |            |
|            |            | <b>Self-Learning</b> : Conformal mapping, linear, bilinear mapping, cross ratio, fixed points and standard transformations.                                 |           |            |
| <b>5.0</b> |            | <b>Statistical Techniques</b>   | <b>06</b> |            |
|            | <b>5.1</b> | Karl Pearson's Coefficient of correlation ( $r$ ) and related concepts with problems.   |           | <b>CO5</b> |
|            | <b>5.2</b> | Spearman's Rank correlation coefficient ( $R$ ) (Repeated & non repeated ranks with problems).  |           |            |
|            | <b>5.3</b> | Lines of regression.  |           |            |
|            |            | <b>Self-Learning</b> : Covariance.  |           |            |
| <b>6.0</b> |            | <b>Probability Theory</b>   | <b>06</b> |            |
|            | <b>6.1</b> | Total Probability theorem and Bayes' theorem.   |           | <b>CO6</b> |
|            | <b>6.2</b> | Discrete and continuous random variable with probability distribution and probability density function.   |           |            |
|            | <b>6.3</b> | Expectation, Variance, Laws of expectation.   |           |            |
|            | <b>6.4</b> | Moment generating function, Raw and central moments up to 4th order.  |           |            |

**Pre-requisite:**

1. FEC104 -Programming in C

**Program Outcome:**

1. PO1: Engineering knowledge
2. PO2: Problem analysis
3. PO3: Design/Development of solutions
4. PO4: Conduct investigations of complex problems
5. PO10: Communication
6. PO12: Life-long learning

**Course Objectives:**

1. To describe linear and Nonlinear data structures.
2. To apply various operations on data structures and select the appropriate one to solve a specific real-world problem.
3. To understand various graph concepts.
4. To discuss searching and Hashing techniques.
5. To analyze algorithms using various methods.
6. To apply algorithmic techniques to solve real-world computational problems.

**Course Outcomes:**

After successful completion of the course, students will be able to:

1. Illustrate Linear and Non-Linear data structures and Discuss operations on stack and queue.
2. Apply operations like searching, insertion, deletion in the tree.
3. Analyze various operations of graph.
4. Apply various searching and hashing operations.
5. Solve optimization problems using greedy strategy and analyze the complexity.
6. Explain backtracking strategy.

**Pre-requisite:**

1. FEC 101 Applied Mathematics –I

**Program Outcomes addressed:**

- PO1: Engineering knowledge.  
PO2: Problem analysis.  
PO3: Design/ Development of solution.

**Course Objectives:**

1. To cultivate clear thinking and creative problem solving.
2. To acquire conceptual understanding of fundamentals of grammar and languages.
3. To build concepts of theoretical design of deterministic and non-deterministic finite automata
4. To understand the concept of push down automata.
5. To develop understanding of different types of Turing machines and applications.
6. To understand the concept of undecidability.

**Course Outcomes:**

Upon completion of the course, learners will be able to:

1. Understand the notion of mathematical thinking, mathematical proofs and to apply them in problem solving.
2. Understand concepts of Theoretical Computer Science, difference and equivalence of DFA and NFA, languages described by finite automata and regular expressions.
3. Illustrate the equivalence of languages described by finite automata and regular expressions.
4. Device regular and context-free grammar while identifying strings and tokens.
5. Design pushdown automata to recognize the language.
6. Develop an understanding of computation through Turing Machine and understanding of decidability and undecidability acquire fundamental.

**Pre- requisite:**

1. FEC104 C- Programming

**Program Outcomes Addressed**

1. PO1: Engineering Knowledge
2. PO2: Problem analysis
3. PO3: Design/development of solutions
4. PO11: Lifelong learning

**Course Objectives:**

1. To understand the basics of database systems.
2. To develop an entity-relationship data model and its mapping to a relational model.
3. To learn relational algebra and formulate SQL queries.
4. To apply normalization techniques to normalize the database.
5. To understand the concept of transactions, concurrency control, and recovery techniques.
6. To learn and explore recent databases and their applications.

**Course Outcomes: Learners will be able to**

1. Identify the purpose of the database management system and its operational details.
2. Construct an ER/EER diagram, a relational model, and formulate relational algebra queries.
3. Apply SQL queries to the given database.
4. Apply normalization techniques for relational database design.
5. Illustrate the concepts of transaction management, concurrency control and database recovery.
6. Understand the fundamentals of recent databases and their uses.

**Pre-requisite:**

1. FEC204 – Digital System Design

**Program Outcomes Addressed:**

1. PO1: Engineering Knowledge
2. PO2: Problem Analysis
3. PO3: Design/Development of Solutions
4. PO5: Engineering Tool Usage
5. PO6: The Engineer and The World
6. PO11: Life-Long Learning

**Course Objectives:**

The course aims to provide students with:

1. A comprehensive understanding of computer architecture and organization, including functional units and number representations.
2. Knowledge of processor architecture, instruction formats, and control unit design.
3. Insights into memory hierarchy, virtual memory, and cache memory concepts.
4. An understanding of I/O organization, peripheral interfacing, and data transfer mechanisms.
5. Exposure to advanced processor principles, including parallel processing and multi-core architectures.
6. Practical problem-solving skills related to instruction execution, memory management, and system performance optimization.

**Course Outcomes:**

Upon completion of this course, learners will be able to:

1. Describe the basic organization of a computer system, including functional units.
2. Apply data representation techniques and arithmetic algorithms for efficient computation and problem-solving in computer architecture.
3. Analyze processor architectures, instruction formats, addressing modes, arithmetic algorithms, and

control unit design for efficient instruction execution.

4. Examine memory hierarchy, virtual memory management techniques, and cache organization for performance optimization.
5. Apply I/O interfacing concepts and peripheral device communication.
6. Differentiate advanced processor concepts, parallel processing, and system bus architectures.

**Pre-requisite:**

1. FEL103- Knowledge of C programming

**Program Outcomes Mapped:**

1. PO1: Engineering Knowledge
2. PO2: Problem Analysis
3. PO3: Design and development of solutions
4. PO4: Conduct investigations of complex problems
5. PO9: Individual and team work
6. PO10: Communication
7. PO11: Lifelong Learning

**Lab Objectives:**

1. To implement basic data structures such as arrays, linked lists, stacks and queues.
2. To Solve problem involving graphs, and trees.
3. To Select an appropriate data structure for the given problem.
4. To introduce the methods of designing and analyzing algorithms.
5. To design and implement efficient algorithms for a specified application.
6. To strengthen the ability to identify and apply a suitable algorithm for the given real-world problem.

**Lab Outcomes:**

Upon completion of this course, the learner will be able to:

1. Apply various linear data structures to perform operations like insertion, deletion, searching and traversing on them.
2. Apply various nonlinear data structures & be able to handle operations like insertion, deletion, searching and traversing on them.
3. Choose appropriate data structure and apply it in various problems.
4. Compare the complexity of the algorithms for specific problems.
5. Use appropriate algorithms to solve computational problems.

6. Implement advanced problem-solving techniques like backtracking and branch & bound.

| <b>Suggested Experiments:</b> Students are required to complete at least 10 experiments. |  |           |
|--|--|-----------|
| All 10 experiments should cover all 6 LOs mentioned above.                               |  |           |
| <b>Sr. No.</b>   | <b>Title of Experiments</b>  | <b>LO</b> |
| 1  | Implement Stack ADT using array.   | LO1       |
| 2  | Convert an Infix expression to Postfix expression using stack ADT.                 | LO1       |
| 3  | Evaluate Postfix Expression using Stack ADT.                                       | LO1, LO3  |
| 4  | Implement Circular Queue ADT using array.  | LO1, LO3  |
| 5  | Implement Circular Linked List ADT.  | LO1       |
| 6  | Implement Doubly Linked List ADT.  | LO2       |
| 7  | Implement Priority Queue ADT using array.  | LO3       |
| 8  | Implement Singly Linked List ADT.  | LO2       |
| 9  | Implement Binary Search Tree ADT using Linked List.                                | LO3       |
| 10   | Implement Graph Traversal techniques a) Depth First Search b) Breadth First Search | LO2       |
| 11   | Implementation of selection sort and insertion sort.                               | LO4       |
| 12   | Implementation of merge sort and quick sort.                                       | LO4       |
| 13   | Implementation of fractional knapsack problem using greedy approach.               | LO5       |
| 14   | Implementation of Dijkstra's algorithm for single source shortest path.            | LO5       |
| 15   | Implementation of N-Queen Problem using Backtracking.                              | LO6       |
| 16   | Implementation of sum of subsets using Backtracking.                               | LO6       |

### Term Work:

Term work should consist of at least 10 experiments.

Journal must include at least 2 assignments.

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. The assignments should be students' centric and an attempt should be made to make assignments more meaningful, interesting and innovative. Term work will be assessed as Continuous Internal Assessment Practical (CIAP).

### Term work Marks (CIAP):

25 Marks (Total Marks) = 15 Marks (Experiment) + 05 Marks (Assignments) + 05 Marks (Attendance)

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.

### Practical Exam: (2 hours/ 25 Marks)

End-semester Practical and oral exam will be held based on the above syllabus and will be conducted as End Semester Examination Practical (ESEP).

**Pre-requisite:**

1. FEC104 C- Programming

**Program Outcomes addressed :**

1. PO2: Problem analysis
2. PO3: Design / Development of Solutions.
3. PO5: Modern Tool Usage
4. PO7: Ethics
5. PO8: Individual and Collaborative Team Work
6. PO9: Communication
7. PO11: Lifelong learning

**Lab Objectives:**

1. To explore the design and development of a relational model.
2. To write SQL basic and complex queries.
3. To learn transaction processing and concurrent data access.

**Lab Outcomes:**

Upon completion of the course, Learners will be able to:

1. Design an ER/EER diagram and convert it to a relational model for the real-world application.
2. Apply DDL, DML, DCL, and TCL commands.
3. Implement simple and complex queries.
4. Implement triggers and procedures.
5. Demonstrate the concept of concurrent transaction execution.
6. Illustrate the front-end-backend connectivity.

| <b>Suggested List of Experiments:</b> |  | <b>LO</b> |
|---------------------------------------|--|-----------|
| <b>Sr. No.</b>                        | <b>Title of Experiments</b>  |           |
| 1                                     | Identify the case study and detail the statement of the problem. Design an entity-relationship (ER) / extended entity-relationship model.(Use Lucidchart/Draw.io/UML tool) | LO 1      |
| 2                                     | Mapping ER/EER to a relational schema model.   | LO 1      |
| 3                                     | Design a database using Data Definition Language (DDL) and apply integrity constraints for the specified system.   | LO 2      |
| 4                                     | Apply DML commands for the specified system.   | LO 2      |
| 5                                     | Implement Simple queries, string manipulation operations, and aggregate functions.   | LO 3      |
| 6                                     | Implement various join operations.   | LO 3      |
| 7                                     | Implement Nested and Complex queries.  | LO 3      |
| 8                                     | Implement DCL and TCL commands.  | LO 2      |
| 9                                     | Implement procedures and functions.  | LO 4      |
| 10                                    | Implementation of views and triggers.  | LO 4      |
| 11                                    | Implementation and demonstration of transaction and concurrency control techniques using locks.  | LO 5      |
| 12                                    | Demonstrate database connectivity.   | LO 6      |
| 13                                    | Implementation of Graph Query Language   | LO3       |

**Pre-requisite:**

FEL203 -Digital System Design Lab

**Program Outcomes Addressed:**

1. PO1: Engineering Knowledge
2. PO2: Problem Analysis
3. PO3: Design/Development of Solutions
4. PO5: Engineering Tool Usage
5. PO7: Ethics
6. PO8: Individual and Collaborative Team Work
7. PO11: Life-Long Learning

**Lab Objectives:**

The course aims to equip students with the ability to:

1. Understand fundamental arithmetic algorithms, including Booth's algorithm and division algorithms, through implementation.
2. Develop skills in designing and simulating ALU, memory, and cache memory using appropriate simulation tools.
3. Apply assembly programming concepts for arithmetic operations, data transfer, and code conversions using 8086 programming tools (Debug/TASM/MASM/8086kit).
4. Demonstrate proficiency in array manipulation techniques such as sorting, finding the minimum/maximum value, and computing GCD/LCM using 8086 assembly language.
5. Perform data transfer operations and control unit functionalities using 8086 assembly programming.
6. Interface peripheral devices like 8255 for read/write operations and waveform generation.

**Lab Outcomes:**

Upon completion of this course, learners will be able to:

1. Apply Booth's multiplication algorithm and restoring/non-restoring division algorithms using assembly language.

2. Design and simulate ALU, memory, and cache memory structures using a simulator.
3. Solve arithmetic operations on 8-bit and 16-bit data using assembly programming tools.
4. Develop assembly programs for code conversion (Hex-BCD, ASCII-BCD), data transfer, and factorial calculation using 8086.
5. Apply array-based algorithms, such as sorting and finding the GCD, LCM, minimum, and maximum values using 8086 assembly language.
6. Illustrate interfacing of 8255 PPI with 8086 to perform read/write operations and square wave generation.

**Term Work:**

The term work shall include a total of **10 experiments**. Students must perform **any five experiments** from experiment numbers **1 to 6** and **any four experiments** from experiment numbers **7 to 14**. Additionally, **experiment 15 is compulsory** for all.

At least 02 assignments covering the entire syllabus must be given on the content of theory and practicals of “Computer Organization and Architecture”. The assignments should be students’ centric and an attempt should be made to make assignments more meaningful, interesting and innovative. Term work will be assessed as Continuous Internal Assessment Practical (CIAP).

**Term work Marks:**

- 25 Marks (Total Marks) = 15 Marks (Experiment) + 05 Marks (Assignments) + 05 Mark (Attendance).
- The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.

**Pre-requisite:**

Programming Languages

1. FEC104: C – Programming
2. FEL205: Object Oriented Programming Methodology Lab

**Program Outcomes Addressed:**

1. PO1: Engineering Knowledge
2. PO2: Problem Analysis
3. PO3: Design/Development of Solutions
4. PO4: Conduct investigation of complex problems
5. PO5: Engineering Tool Usage
6. PO6: The Engineer and The World
7. PO7: Ethics
8. PO8: Individual and Collaborative Team Work
9. PO9: Communication
10. PO10: Project Management and Finance
11. PO11: Life-Long Learning

**Lab Objectives:**

1. To provide a comprehensive understanding of Python programming, covering both fundamental and advanced concepts.
2. To solve real-world applications using Data Structure and Multi-threading concept.
3. To introduce OOP principles for efficient coding practices.
4. To enhance knowledge of data analysis and visualization.
5. To prepare students for building Python-based applications involving GUI with database connectivity and networking.
6. To prepare students for analysing and visualizing real time data.

### Lab Outcomes:

Upon completion of course, learners will be able to:

1. Apply Python fundamentals, including data types, operators, and control structures to develop simple program.
2. Illustrate OOP concepts, files handling, directories, and text processing operations using Python.
3. Analyze different types of data structures such as linked lists, stacks, queues, and dequeues to solve computational problems effectively.
4. Apply multithreading concepts using Python for efficient concurrent execution.
5. Apply skills in integrating Python with GUI applications, networking, and database systems.
6. Apply data analysis and visualization techniques using tools like Pandas, NumPy, Matplotlib, and Seaborn

| Module No. | Unit No.   |   | Hrs.      | CO         |
|------------|------------|---|-----------|------------|
| <b>1</b>   |            | <b>Python basics</b>  |           |            |
|            | <b>1.1</b> | Introduction, Features, Python Identifiers, Keywords, Variables and Comments Indention, Operators in python, Input and print functions.   | <b>06</b> | <b>LO1</b> |
|            | <b>1.2</b> | Control flow statement- Conditional statements (if, if...else, nested if), Looping in Python (while loop, for loop, nested loops), Loop manipulation using continue, pass, break.   |           |            |
|            | <b>1.3</b> | Data Types in python: Number, Arrays in python, String and Character in python, Functions, Data Structures - List and Tuples, Dictionaries, Sets.   |           |            |
|            | <b>1.4</b> | Functions- Types, parameters, arguments: positional arguments, keyword arguments, parameters with default values, functions with arbitrary arguments, Recursion, Scope of variables- Local and global scope, anonymous functions. |           |            |
|            |            | <b>Self-learning:</b> Iterators and Generators  |           |            |
| <b>2</b>   |            | <b>Advanced Python- OOP, File Handling and Exception Handling</b>   |           |            |
|            | <b>2.1</b> | Introduction to OOP – Classes and Objects: Creating Classes, Creating Instance Objects, Access Modifiers, Inheritance, Polymorphism, Operator Overloading, Abstract Classes, Overriding Methods.                                  | <b>05</b> | <b>LO2</b> |
|            | <b>2.2</b> | Files in Python, Directories, Building Modules, Packages, Text Processing, Regular expression in python.  |           |            |
|            | <b>2.3</b> | Exception handling: Compile time errors, Runtime errors, exceptions, types of exception, try statement, except block, raise statement, User - Defined Exceptions.   |           |            |
|            |            | <b>Self-learning:</b> Experiment to Build a Personal Notes App (File-Based Storage), Automate Daily Tasks with Python.  |           |            |
| <b>3</b>   |            | <b>Data Structure in Python</b>   |           |            |
|            | <b>3.1</b> | Linked List, Stack, Queue, Dequeue.   | <b>02</b> | <b>LO3</b> |
|            |            | <b>Self-learning:</b> polynomial representation and operations using linked   |           |            |

|          |            |   |           |            |
|----------|------------|---|-----------|------------|
|          |            | list, Task Queues in Web Servers.   |           |            |
| <b>4</b> |            | <b>Python Integration Primer</b>  |           |            |
|          | <b>4.1</b> | Graphical User interface, Python database connectivity, Introduction to APIs: Fetching Data from Web Services.<br>Django web application Framework.   | <b>04</b> | <b>LO4</b> |
|          |            | <b>Self-learning:</b> Fetch weather data from a public API and display it.  |           |            |
| <b>5</b> |            | <b>Multithreading</b>   | <b>03</b> | <b>LO5</b> |
|          | <b>5.1</b> | Thread and Process, starting a thread, threading module, Synchronizing threads.   |           |            |
|          | <b>5.2</b> | Socket Programming.   |           |            |
|          |            | <b>Self-learning:</b> Multithreaded Priority Queue.   |           |            |
| <b>6</b> |            | <b>Data Analysis and Visualization libraries</b>  | <b>06</b> | <b>LO6</b> |
|          | <b>6.1</b> | NumPy - Creating NumPy arrays, Indexing and slicing in NumPy, Dimensions of Arrays, Attribute of array, manipulating array shapes, working with multi-dimensional arrays, Indexing and slicing in multi-dimensional arrays, Matrices in NumPy, Mathematical Functions of NumPy. |           |            |
|          | <b>6.2</b> | Pandas - Creating Data Frame from an Excel Spreadsheet, .csv File, Python Dictionary and Python List of Tuples, Operations on Data Frames, Series and Data Frames.  |           |            |
|          | <b>6.3</b> | Matplotlib, Seaborn - Introduction to Matplotlib library, Line properties, Plots and subplots, Types of Plots, Introduction to Seaborn. Bar Graph, Histogram, Pie Chart, Line Graph.  |           |            |
|          |            | <b>Self-learning:</b> Creating array views copies, Aggregating, Merge Data Frames, Interactive Visualization with Plotly.   |           |            |
|          |            | <b>Total</b>  | <b>26</b> |            |

| <b>Suggested List of Programming Assignments/laboratory Work:</b> |   | <b>LO</b> |
|---|---|-----------|
| <b>Sr. No.</b>  | <b>Name of the Experiment</b>   |           |
| 1   | Exploring basics of python like data types (strings, list, array, dictionaries, set, tuples) and control statements.  | LO1       |
| 2   | Creating functions, classes and objects using python. Demonstrate exception handling and inheritance.   | LO1, LO2  |
| 3   | Exploring Files and directories<br>Python program to append data to existing file and then display the entire file<br>Python program to count number of lines, words and characters in a file.<br>Python program to display file available in current directory | LO2       |
| 4   | Menu driven program for data structure using built in function for linked list, stack and queue.  | LO3       |
| 5   | Creating GUI with python containing widgets such as labels, textbox, radio, checkboxes and custom dialog boxes.<br>Program to demonstrate CRUD ( <b>create, read, update and delete</b> ) operations on database (SQLite/ MySQL) using python.                  | LO4       |
| 6   | To learn how to make API requests in Python using the requests module and fetch data from a public web service.   | LO4       |
| 7   | Programs on Threading using python.   | LO5       |
| 8   | To implement client server communication using socket programming   | LO5       |
| 9   | To explore the basics of NumPy methods and demonstrate the use of NumPy array objects for performing efficient numerical computations, including array creation, operations, and manipulations.   | LO6       |
| 10  | To explore and understand the functionalities of <b>Pandas Series and Data Frames</b> , including their creation, manipulation, and grouping using the groupby () function in Python.   | LO6       |
| 11  | Program to demonstrate Data Series and Data Frames using Pandas.  | LO6       |
| 12  | Graphical representation and analysis of the data using python to analyze and visualize a given dataset using Python by applying various graphical techniques.  | LO6       |
| 13*   | Program to send email and read content of URL.  | LO5       |

### **Term Work**

- 1 Term work should consist of 12 experiments and performance of 13<sup>th</sup> Experiment is optional
- 2 Journal must include at least 02 assignments
- 3 Mini Project based on the content of the syllabus (Group of maximum 2-3 students)
- 4 The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.
- 5 Total 25-Marks (Experiments: 10-marks, Assignment: 05-marks, Attendance: 05-marks, Mini Project: -5-marks)
- 6 The assignments should be students' centric and an attempt should be made to make assignments more meaningful, interesting and innovative. Term work will be assessed as Continuous Internal Assessment Practical (CIAP)

### **Oral & Practical exam**

Based on the entire syllabus of **CEL304: Skill Lab (Python Programming)** will be conducted as End Semester Examination Practical (ESEP).

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.

| Course Code | Course Name     | Teaching Scheme (Hrs.) |           |          | Credits Assigned |           |          |       |
|-------------|-----------------|------------------------|-----------|----------|------------------|-----------|----------|-------|

| CSEM301     | Mini Project 1A | --                 | --  | --  | 25   | 25   | 50    |

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem Analysis
3. PO3: Design/Development of Solutions
4. PO4: Conduct investigations of complex problems
5. PO5: Engineering Tool Usage
6. PO6: The Engineer and The World
7. PO7: Ethics
8. PO8: Individual and Collaborative Team work
9. PO9: Communication
10. PO10: Project Management & Finance
11. PO11: Life-long learning

**Objectives**

1. To acquaint with the process of identifying the needs and converting it into the problem.
2. To familiarize the process of solving the problem in a group.
3. To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
4. To inculcate the process of Self-Learning and research.

**Outcome:** Upon completion of this course, learners will be able to...

1. Identify problems based on societal /research needs.
2. Apply Knowledge and skill to solve societal problems in a group.
3. Develop interpersonal skills to work as a member of a group or leader.
4. Deduce the proper inferences from available results through theoretical/ experimental /simulations.
5. Analyze the impact of solutions in societal and environmental context for sustainable development.
6. Apply standard norms of engineering practices.
7. Develop skills in written and oral communication.

8. Illustrate capabilities of Self-Learning in a group, which leads to life long learning.
9. Explain project management principles during project work.

### **Guidelines for Mini Project**

1. Students shall form a group of 3 to 4 students, while forming a group shall not be allowed for less than three or more than four students, as it is a group activity.
2. Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
3. Students shall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
4. A logbook to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
5. Faculty supervisors may give input to students during mini project activity; however, focus shall be on Self-Learning.
6. Students in a group should understand problems effectively, propose multiple solutions and select best possible solution in consultation with guide/ supervisor.
7. Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
8. The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
9. With the focus on Self-Learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
10. However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case-by-case basis.

### **Guidelines for Assessment of Mini Project: Term Work**

- The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of Term work marks for both semesters shall be as below.
  1. Marks awarded by guide/supervisor based on logbook: 10
  2. Marks awarded by review committee 10
  3. Quality of Project report 05

The review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines.

**One-year project:**

- In the first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on the presentation given by the students' group.
  - First shall be for finalization of problem
  - Second shall be on finalization of proposed solution of problem.
- In the second semester the expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.
  - The first review is based on the readiness of building a working prototype to be conducted.
  - Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

**Half-year project:**

- In this case in one semester students' group shall complete project in all aspects including,
  - Identification of need/problem
  - Proposed final solution
  - Procurement of components/systems
  - Building prototype and testing
- Two reviews will be conducted for continuous assessment,
  - First shall be for finalization of problem and proposed solution
  - Second shall be for implementation and testing of solution.

**Assessment criteria of Mini Project**

**Mini Project** shall be assessed based on the following criteria;

1. Quality of survey/ need identification
2. Clarity of Problem definition based on need.
3. Innovativeness in solutions
4. Feasibility of proposed problem solutions and selection of best solution
5. Cost effectiveness
6. Societal impact
7. Innovativeness
8. Cost effectiveness and Societal impact
9. Full functioning of working model as per stated requirements
10. Effective use of skill sets
11. Effective use of standard engineering norms
12. Contribution of an individual's as member or leader
13. Clarity in written and oral communication

- In **one year, project**, first semester evaluation may be based on first six criteria's and remaining may be used for second semester evaluation of performance of students in mini project.
- In the case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

**Guidelines for Assessment of Mini Project Practical/Oral Examination:**

- The report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organization's having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

**Mini Project** shall be assessed based on the following points.

1. Quality of problem and Clarity
2. Innovativeness in solutions
3. Cost effectiveness and Societal impact
4. Full functioning of working model as per stated requirements
5. Effective use of skill sets
6. Effective use of standard engineering norms
7. Contribution of an individual's as member or leader
8. Clarity in written and oral communication

#### Course Assessment:

**ISE:** To be conducted in any of these forms - Assignment/ Quiz/ Presentation/ Class Test/ Case study etc. of 15 marks and 5 marks attendance.

**MSE:** To be conducted as written examination for 20 marks (on 50% syllabus)

### **End Semester Examination**

ESE duration of 03 hours and 80 marks and to be scaled down to 60

The question paper will comprise of 03 questions.

Question1 (20 marks): - Solve any 04 out of 06. All questions carry 05 marks each.

Question 2 (40 marks): - Solve any 04 out of 06. All questions carry 10 marks each.

Question3 (20 marks):- Solve any 04 out of 06. All questions carry 05 marks each.

All COs should be mapped as per the weightage in the syllabus.

**Pre-requisite:**

1. CEC305- Computer Organization and Architecture

**Program Outcomes addressed:**

1. PO1: Engineering Knowledge
2. PO2: Problem analysis
3. PO3: Design/development of solutions
4. PO4: Conduct investigation of complex problems
5. PO5: Modern Tool Usage
6. PO6: The Engineer and Society

**Course Objectives:**

1. To understand the basic concepts of Operating System, its functions and services.
2. To introduce the concept of a process and its management like transition, scheduling, etc
3. To understand basic concepts related to Inter-process Communication (IPC) like mutual exclusion, deadlock, etc. and role of an Operating System in IPC.
4. To understand the concepts and implementation of memory management policies and virtual memory.
5. To understand the functions of Operating System for storage management and device management.
6. To study the need and fundamentals of special-purpose operating system with the advent of new emerging technologies.

**Course Outcomes:** Upon completion of this course, learners will be able to...

1. Identify the importance of operating system, its functions and services.
2. Compare process scheduling algorithms to ensure efficient execution of processes.
3. Apply concept of process synchronization and deadlocks.
4. Analyse memory management algorithms in effective allocation of main memory usage.
5. Discuss various File management methods and analyse I/O management algorithms for performance and quality criterion.
6. Compare the functions of various special-purpose Operating Systems.

**Pre- requisite:** None

**Program Outcomes Addressed**

1. PO1: Engineering Knowledge
2. PO2: Problem analysis
3. PO3: Design/development of solutions
4. PO4: Conduct investigation of complex problems
5. PO5: Engineering Tool Usage
6. PO6: The Engineer and The World

**Course Objectives:**

1. To interpret the issues and challenges of protocols design while delving into TCP/IP protocol suite.
2. To introduce concepts and fundamentals of physical layer
3. To describe various functions of Data Link Layer (DLL).
4. To compare the strengths and weaknesses of various routing algorithms.
5. To discuss various transport layer protocols.
6. To discuss various application layer protocols.

**Course Outcomes: Learners will be able to**

1. Discuss the concepts of data communication at physical layer and Compare ISO – OSI model with TCP/IP model.
2. Describe the various functions of Physical Layer.
3. Illustrate different design issues and error detection and correction mechanisms at data link layer.
4. Construct networks using IP addressing and sub-netting / super-netting schemes.
5. Apply transport layer protocols and congestion control algorithms to network scenarios.
6. Interpret the protocols at application layer.

**Course Assessment:**

**ISE:**

To be conducted in any of these forms - Assignment/ Quiz/ Presentation/ Class Test/ Case study etc. of 20 marks.

ISE 20 marks = 05 marks for attendance + 15 marks for activities.

**MSE:**

To be conducted as written examination for 20 marks (on 40% - 50% syllabus)

**End Semester Examination:**

**\$ ESE of duration 03 hours are of 80 marks and scaled to 60.**

1. Question paper will comprise of 03 questions.
2. Question1 (20 marks): - Solve any 04 out of 06. All questions carry 05 marks each.
3. Question 2 (40 marks): - Solve any 04 out of 06. All questions carry 10 marks each.
4. Question3 (20 marks) :- Solve any 04 out of 06. All questions carry 05 marks each.
5. All COs should be mapped as per the weightage in the syllabus.

**Pre-requisite:** None

**Program Outcomes Addressed**

1. PO2: Problem Analysis
2. PO3: Design/Development of Solutions
3. PO5: Engineering Tool Usage
4. PO6: The Engineer and The World
5. PO7: Ethics
6. PO8: Individual and Collaborative Team Work
7. PO9: Communication
8. PO10: Project Management and Finance
9. PO11: Life-Long Learning

**Course Objectives:**

1. To describe the fundamentals of critical thinking and fair-minded reasoning for effective decision-making.
2. To differentiate personal thinking stages and implement structured strategies for continuous cognitive growth.
3. To analyze key elements of thought and intellectual standards to enhance logical reasoning.
4. To examine the principles of design thinking and apply them to solve real-world problems through an iterative, user-centered approach.
5. To demonstrate hands-on experience with idea generation, customer insights, and problem framing to drive innovation.
6. To employ creative problem-solving techniques such as brainstorming, prototyping, and hypothesis validation to design user-centric solutions.

**Course Outcomes:** Learners will be able to

1. Interpret the fundamentals of critical thinking and fair-minded reasoning for effective decision-making.
2. Identify their cognitive development stage and implement structured strategies to progress as a critical thinker.
3. Apply intellectual standards like clarity, accuracy, and logic to improve reasoning and problem-solving

skills.

4. Integrate design thinking principles to create innovative, balanced, and user-centered solutions.
5. Develop a broad perspective in understanding customer needs and effectively define problem statements using diverse methodologies.
6. Implement creative solutions and enhance ideas through iterative prototyping and user feedback using brainstorming techniques.

**Pre-requisite:**

1. FEC101: Applied Mathematics -I
2. FEC201: Applied Mathematics -II

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem analysis
3. PO3: Design/Development of Solutions

**Course Objectives:**

1. To conceptualize the basic ideas and techniques underlying the design of intelligent systems.
2. To make students understand and explore the mechanism of mind that enables intelligent thought and action.
3. To make students understand advanced representation formalism and search techniques.
4. To make students understand how to deal with uncertain and incomplete information.

**Course Outcomes:**

After successful completion of the course, students will be able to:

1. to understand the fundamental concepts, evolution, and applications of AI.
2. to analyze intelligent agents, their structures, and problem-solving approaches using search methods.
3. to evaluate different AI problem-solving techniques, including uninformed, informed, and optimization-based search algorithms.
4. to apply logical reasoning and knowledge representation techniques for AI-based inference and decision-making.
5. to understand AI planning methods and different learning paradigms, including reinforcement learning.
6. to explore AI applications in real-world domains such as NLP, robotics, healthcare, retail, and banking.

**Pre-requisite:**

1. Data Structures and Algorithms

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem analysis
3. PO3: Design/ development of solutions:
4. PO4: Conduct investigations of complex problems:
5. PO5: Modern tool usage:
6. PO6: The engineer and society

**Course Objectives:**

1. Understand advanced data structures and their applications in solving computational problems.
2. Analyze and implement efficient hashing techniques for optimized search operations.
3. Explore priority queues and balanced trees to improve data retrieval and manipulation.
4. Apply graph algorithms for solving network, optimization, and traversal problems.
5. Design efficient string processing and pattern matching algorithms for text-based applications.
6. Implement real-world applications using advanced data structures for improved system performance.

**Course Outcomes:**

After successful completion of the course student will be able to...

1. Apply and analyze advanced hashing techniques for fast data retrieval and collision handling.
2. Implement and evaluate priority queues and balanced trees for efficient search and storage.
3. Solve problems using graph algorithms like Topological Sorting, Shortest Paths, and Maximum Flow.
4. Design efficient pattern matching algorithms using KMP, Rabin-Karp, and Suffix Trees.
5. Develop optimized memory management techniques using Tries, Skip Lists, and Segment Trees.
6. Implement real-world applications using advanced data structures in domains like AI, Blockchain, and Networking.

**Pre-requisite:** Basic Accounting principles, Quantitative skills etc.

**Program Outcomes addressed:**

1. PO1: Engineering Knowledge
2. PO2: Problem Analysis
3. PO11: Life-Long Learning

**Course Objectives:** To acquire knowledge and understanding of the concepts, techniques, and practices of cost and management accounting and to develop skills for decision making.

**Course Outcomes:** Upon completion of this course, learners will be able to...

- 1: To understand and analyze different cost concept and methods.
- 2: To understand the Elements of Cost & Cost classification.
- 3: To apply various material concepts & classifications for preparation of cost sheet.
- 4: To analyze various techniques of costing and its application in Finance, budgets and budgetary control.
- 5: To develop requisite data for cost control and cost reduction.
- 6: To evaluate marginal costing techniques for decision making.

#### Course Assessment:

**ISE:** To be conducted in any of these forms - Assignment/ Quiz/ Presentation/ Class Test/ Case study etc. of 15 marks and 5 marks attendance.

**MSE:** To be conducted as written examination for 20 marks (on 50% syllabus)

#### End Semester Examination:

**\$ ESE of duration 03 hours are of 80 marks and scaled to 60.**

1. Question paper will comprise of 03 questions.
2. Question1 (20 marks): - Solve any 04 out of 06. All questions carry 05 marks each.
3. Question 2 (40 marks): - Solve any 04 out of 06. All questions carry 10 marks each.
4. Question3 (20 marks) :- Solve any 04 out of 06. All questions carry 05 marks each.
5. All COs should be mapped as per the weightage in the syllabus.

| CSEL401     | Operating System Lab | --                 | --  | --  | 25   | 25   | 50    |

**Pre-requisite:**

1. Knowledge on Operating system principles.

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem analysis
3. PO3: Design/Development of Solutions
4. PO4: Conduct investigations of complex problems
5. PO5: Engineering tool usage
6. PO8: Individual and Collaborative Team Work
7. PO10: Project Management and Finance

**Lab Objectives:**

1. To gain practical experience with designing and implementing concepts of operating systems such as system calls, CPU scheduling, process management, memory management, file systems and deadlock handling using C language in Linux environment.
2. To familiarize students with the architecture of Linux OS.
3. To provide necessary skills for developing and debugging programs in Linux environment.
4. To learn programmatically to implement simple operation system mechanisms.

**Lab Outcomes:**

Upon completion of this course, learners will be able to...

1. Illustrate basic Operating system Commands, Shell scripts, System Calls.
2. Simulate and implement various processes, scheduling algorithms and evaluate their performance.
3. Analyze and experiment various methods of synchronization and deadlocks.
4. Show various Memory Management techniques and evaluate their performance.
5. Illustrate and analyze concepts of virtual memory.
6. Implement and analyze concepts of file management and I/O management techniques.

### Suggested List of Experiments

| Sr. No. |     | Content   | LO         |
|---------|-----|---|------------|
| 1       |     | <b>Explore Linux Commands</b>   | <b>LO1</b> |
|         | 1.1 | Explore usage of basic Linux Commands and system calls for file, directory and process management.<br>For eg: (mkdir, chdir, cat, ls, chown, chmod, chgrp, ps.<br>system calls: open, read, write, close, getpid, setpid, getuid, getgid, getegid, geteuid, sort.)  |            |
|         | 1.2 | Implement any one basic commands of linux like ls, cp, mv and others using kernel APIs.   |            |
| 2       |     | <b>Linux shell script</b>   | <b>LO1</b> |
|         | 2.1 | To write shell script<br>a. Write a grep/egrep script to find the number of words character, words and lines in a file.<br>b. Write an awk script to develop a Fibonacci series.<br>c. Write an awk script to display the pattern of given string or number.<br>d. Write an egrep script to display list of files in directory  |            |
|         | 2.2 | Write shell scripts to do the following:<br>a. Display OS version, release number, kernel version<br>b. Display top 10 processes in descending order<br>c. Display processes with highest memory usage.<br>d. Display current logged in user and log name.<br>e. Display current shell, home directory, operating system type, current path setting, current working directory. |            |
| 3       |     | <b>Linux- Process</b>   | <b>LO1</b> |
|         | 3.1 | a. Create a child process in Linux using the fork system call. From the child process obtain the process ID of both child and parent by using getpid and getppid system call.<br>b. Explore wait and waitpid before termination of process.   |            |
| 4       |     | <b>Process Management: Scheduling</b>   | <b>LO2</b> |
|         | 4.1 | a. Write a program to demonstrate the concept of non-preemptive scheduling algorithms.<br>b. Write a program to demonstrate the concept of preemptive scheduling algorithms   |            |
| 5       |     | <b>CPU-OS simulator</b>   | <b>LO2</b> |
|         | 5.1 | Using the <b>CPU-OS simulator</b> analyze and synthesize the following:<br>a. Process Scheduling algorithms.<br>b. Thread creation and synchronization.<br>c. Deadlock prevention and avoidance.  |            |
| 6       |     | <b>Process Management: Synchronization</b>  | <b>LO3</b> |
|         | 6.1 | Write a C program to implement solution of Producer consumer  |            |

|           |             |  |            |
|-----------|-------------|--|------------|
|           |             | problem through Semaphore  |            |
| <b>7</b>  |             | <b>Process Management: Deadlock</b>  | <b>LO3</b> |
|           | <b>7.1</b>  | a. Write a program to demonstrate the concept of deadlock avoidance through Banker's Algorithm<br>Write a program demonstrate the concept of Dining Philosopher's Problem  |            |
| <b>8</b>  |             | <b>Memory Management</b>   | <b>LO4</b> |
|           | <b>8.1</b>  | a. Write a program to demonstrate the concept of MVT and MFT memory management techniques<br>Write a program to demonstrate the concept of dynamic partitioning placement algorithms i.e. Best Fit, First Fit, Worst-Fit etc.  |            |
| <b>9</b>  |             | <b>Memory Management: Virtual Memory</b>   | <b>LO5</b> |
|           | <b>9.1</b>  | a. Write a program to demonstrate the concept of demand paging for simulation of Virtual Memory implementation<br>Write a program in C demonstrate the concept of page replacement policies for handling page faults eg: FIFO, LRU etc.  |            |
| <b>10</b> |             | <b>File Management &amp; I/O Management</b>  | <b>LO6</b> |
|           | <b>10.1</b> | a. Write a C program to simulate File allocation strategies typically sequential, indexed and linked files<br>b. Write a C program to simulate file organization of multi-level directory structure.<br>c. Write a program in C to do disk scheduling - FCFS, SCAN, C-SCAN.<br>d. Raspberry Pi installation. |            |

**Term Work** will be assessed as **Continuous Internal Assessment Practical (CIAP).**

1. Term work should consist of 10 experiments covering all modules.
2. Journal must include at least 2 assignments on content of theory and practical of

“Operating System”

3. The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
4. Total 25 Marks (Experiments: 15-marks, Attendance Theory& Practical: 05-marks, Assignments: 05-marks)

**Practical Exam: (2 hours/ 25 Marks)**

End-semester Practical and oral exam will be held based on the above syllabus and will be assessed as **End Semester Examination Practical (ESEP)**.

| Course Code    | Course Name                 | Teaching Scheme (Hrs.) |           |          | Credits Assigned |           |          |       |

|             |                      | Course Assessment  |     | ESE |      |      |       |
|             |                      | ISE                | MSE |     |      |      |       |
| CSEL402     | Computer Network Lab | --                 | --  | --  | 25   | 25   | 50    |

**Pre-requisite:**

1. Knowledge of assembling of computer and identification of networking components (FEL105)

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem analysis
3. PO3: Design/Development of Solutions
4. PO4: Conduct investigations of complex problems
5. PO5: Engineering tool usage
6. PO6: The Engineer and The World
7. PO8: Individual and Collaborative Team Work
8. PO10: Communication
9. PO11: Lifelong Learning

**Lab Objectives:**

1. To practically explore various networking devices.
2. To compare OSI layers and understand the usage of simulation tools.
3. To discuss various MAC protocols in the Data Link Layer.
4. To explore socket programming applications.
5. To identify the various issues of a packet transfer from source to destination, and how they are resolved by the various existing protocols.
6. To observe various Application Layer Protocols

**Lab Outcomes:**

After successful completion of the course, students will be able to:

1. Simulate the functions of different networking devices and networking commands.
2. Examine the packet formats of each layer in TCP/IP model.
3. Interpret the functioning of MAC protocols of Data Link Layer.
4. Experiment socket programming on different applications.
5. Construct networks to implement network routing protocols.
6. Illustrate the working of Application Layer protocols

| <b>Suggested List of Experiments:</b> |   | <b>LO</b> |
|---------------------------------------|---|-----------|
| <b>Sr. No.</b>                        | <b>Title of Experiments</b>   |           |
| 1                                     | Understand the working of networking devices.   | LO1       |
| 2                                     | Execute Basic networking commands in Linux.   | LO1       |
| 3                                     | Use Wire shark to understand the operation of TCP/IP layers: <ul style="list-style-type: none"> <li>Ethernet Layer: Frame header, Frame size etc.</li> <li>Data Link Layer: MAC address, ARP (IP and MAC address binding)</li> <li>Network Layer: IP Packet (header, fragmentation), ICMP (Query and Echo)</li> <li>Transport Layer: TCP Ports, TCP handshake segments etc.</li> <li>Application Layer: DHCP, FTP, HTTP header formats</li> </ul> | LO2       |
| 4                                     | Design a network and understand the basic working of PING (ICMP) and ARP (DLL).   | LO2       |
| 5                                     | a) Setup a LAN network using Static/ Dynamic IPs and assign multiple IPs .<br>b) Using netstat and route commands of Linux, do the following: <ul style="list-style-type: none"> <li>View current routing table</li> <li>Add and delete routes</li> <li>Change default gateway</li> </ul> c) Perform packet filtering by enabling IP forwarding using IP tables in Linux.   | LO1       |
| 6                                     | Use simulator (Eg. NS2) to understand functioning of ALOHA, CSMA/CD   | LO3       |
| 7                                     | Configure a network and Implement Static Routing.   | LO4       |
| 8                                     | Configure a Network and Distance Vector Routing protocol (RIP).   | LO4       |
| 9                                     | Configure Network using Link State Vector Routing protocol (OSPF).  | LO4       |
| 10                                    | Create VLAN and perform inter VLAN routing.   | LO4       |
| 11                                    | An organization is granted a block of addresses with the beginning address 14.24.74.0/24. The organization needs to have 3 subblocks of addresses to use in its three subnets as shown below: <ul style="list-style-type: none"> <li>One subblock of 120 addresses.</li> <li>One subblock of 60 addresses.</li> <li>One subblock of 10 addresses.</li> </ul>  | LO4       |
| 12                                    | An organization is granted the block 130.34.12.64/26. The organization needs 4 subnets each with equal no hosts. Design the sub networks, find the information about each n/w and implement NAT.  | LO4       |
| 13                                    | Write a program to implement socket programming for chat application.   | LO3       |
| 14                                    | Perform File Transfer and Access using FTP.   | LO5       |
| 15                                    | Perform Remote login using Telnet server.   | LO5       |

**Online Resources:**

1. <https://www.coursera.org/projects/data-forwarding-computer-networks>
2. <https://www.edx.org/course/ilabx-the-internet-masterclass>

**Term Work:**

The termwork must include 10 experiments using simulators like NS2 / Cisco packet Tracer / GNS3 / networking hardware (routers, switches). At least 02 assignments covering the entire syllabus must be given on the content of theory and practical's of "Computer Network". The assignments should be students' centric, and an attempt should be made to make assignments more meaningful, interesting and innovative. Term work will be assessed as Continuous Internal Assessment Practical (CIAP).

**Term work Marks:**

25 Marks (Total Marks) = 15 Marks (Experiment) + 05 Marks (Assignments) + 05 Marks (Attendance)

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.

**Practical Exam: (2 hours/ 25 Marks)**

End-semester Practical and oral exam will be held based on the above syllabus and will be conducted as End Semester Examination Practical (ESEP).

| CSEL403     | Skill Lab Course (Web Technology) | --                 | --  | --  | 25   | 25   | 50    |

**Pre-requisite:**

1. Basic knowledge of programming and data structure Lab

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem analysis
3. PO4: Conduct investigations of complex problems
4. PO8: Individual and Collaborative Team Work
5. PO10: Communication
6. PO11: Life-long learning

**Lab Objectives:**

1. To introduce the methods of designing and analyzing algorithms.
2. Design and implement efficient algorithms for a specified application.
3. Strengthen the ability to identify and apply a suitable algorithm for the given real-world problem.
4. Analyze worst-case running time of algorithms and understand fundamental algorithmic problems.

**Lab Outcomes:**

After successful completion of the course, students will be able to:

1. Implement the algorithms using different approaches.
2. Analyze the complexities of various algorithms.
3. Compare the complexity of the algorithms for specific problems.
4. Use appropriate algorithms to solve computational problems
5. Implement advanced problem-solving techniques like backtracking and branch & bound
6. Understanding complexity classes through implementation and case studies.

| Module No. | Unit No.   |  | Hrs.     | LO                 |
|------------|------------|--|----------|--------------------|
| <b>1.0</b> |            | <b>Foundations of Web Development with Git</b>   | <b>6</b> |                    |
|            | <b>1.1</b> | WWW, Basic Internet Protocols, HTTP request and HTTP response message, HTML – Introduction, history and versions.  |          | <b>LO1<br/>LO2</b> |
|            | <b>1.2</b> | HTML elements: headings, paragraphs, line break, colors and fonts, links, frames, lists, tables, images and forms, Logical and physical tags in HTML5  |          |                    |
|            | <b>1.3</b> | Concept of CSS, Creating Style Sheet, CSS Properties, CSS Styling 4 (Background, Text Format, Controlling Fonts), Working with block elements and objects, Lists and Tables, CSS Id and Class, Box Model (Introduction, Border properties, Padding Properties, Margin properties) CSS Advanced: (Grouping, Dimension, Display, Positioning, Floating, Align, Pseudo class, Navigation Bar, Image Sprites, Attribute selector).<br><b>Basics of Bootstrap:</b> The Grid System, CSS Foundations, Navigation Systems, JavaScript Effects |          |                    |
|            | <b>1.4</b> | Introduction to Git and Github, Benefits of using Github, Pushing the source code into github, Collaborating with others by creating Pull Requests, Working on parallel branches   |          |                    |
|            |            | <b>Self-Learning topic:</b> Create a game using HTML, CSS and Javascript where random shapes (circle, squares, rectangles) of random sizes and random color will appear and disappear on the screen for random time durations (0.5 sec to 3 sec). Clicking on the shape before it disappears will increment your score.  |          |                    |
| <b>2.0</b> |            | <b>Javascript with AJAX</b>  | <b>4</b> |                    |
|            | <b>2.1</b> | Introduction to JavaScript, DOM Manipulation, Data types, Values, Variables, Expressions and Operators, Statements, Objects, Arrays, Functions, Pattern matching with regular expressions, JavaScript in Web Browsers, The Window object, Scripting Documents, Scripting CSS, Handling Events  |          | <b>LO3</b>         |
|            | <b>2.2</b> | Introduction to AJAX, AJAX Components, AJAX with Javascript, AJAX with JQuery, AJAX and JSON, AJAX with Forms and API Integration  |          |                    |
|            |            | <b>Self-Learning topic:</b> Implement a search bar with live suggestions (like Google Search).   |          |                    |
| <b>3.0</b> |            | <b>Back End Development</b>  | <b>5</b> |                    |
|            | <b>3.1</b> | <b>Introduction</b> to PHP- Data types, control structures, built in functions,  |          | <b>LO4</b>         |

|            |            |  |           |            |

| <b>Suggested List of Programming Assignments/laboratory Work:</b> |  | <b>LO</b> |
|---|--|-----------|
| <b>Sr. No.</b>  | <b>Name of the Experiment</b>  |           |
| 1   | Installation of Git, Creating new GIT repository and understanding functionality like Add, Commit, Modify, View.   | LO1       |
| 2   | Develop a straightforward blog page using HTML, CSS, and Bootstrap. The blog page should incorporate images, embedded videos, and a contact form.  | LO2       |
| 3   | Create a portfolio landing page using Html, CSS and JavaScript. Enhance it with features like dark mode and light mode, and incorporate animations to elevate the website's aesthetic appeal.  | LO3       |
| 4   | Design a static HTML page that contains a selection box with a list of 5 countries. When the user selects a country, its capital should be printed next to the list. Add CSS to customize the properties of the font of the capital (color, bold and font size). | LO3       |
| 5   | Validate the fields of registration page created in the first experiment using regular expressions in JavaScript and also Validate login credentials without refreshing the page. (AJAX and JSON).   | LO3       |
| 6   | Build a web page enabling users to retrieve and display real-time weather information for a specific city using AJAX. Students should explore free API providers offering weather data.  | LO3       |
| 7   | Create interactive web pages that fetch, display, and update data from MySQL databases dynamically based on user interactions using PHP.   | LO4       |
| 8   | Create a react application and make use of at least 4 hooks available in react. (Eg: Simple  | LO5       |

|    |  |     |
|----|--|-----|
|    | counter application in react which uses StateHooks).   |     |
| 9  | Design and implement a basic CRUD (Create, Read, Update, Delete) operations system using MongoDB.              | LO5 |
| 10 | A <b>blog platform</b> where users can create, edit, and delete posts, and view others' posts using ExpressJs. | LO5 |
| 11 | Mini Project based on the content of the syllabus (Group of 2-3 students).                                     | LO6 |

**Term Work (CIAP):**

- 1 Term work should consist of 10 experiments and Journal submission.
- 2 Mini Project based on the content of the syllabus (Group of 2-3 students).
- 3 The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.
- 4 Total 25-Marks (Experiments: 10-marks, Attendance: 05-marks, Mini Project:-5-marks, Participation or winning in Web based competition:05-marks).

**Oral & Practical exam(ESEP):**

Based on the entire syllabus of CEL404 Skill based Lab Web Technology will be conducted as End Semester Examination Practical (ESEP).

|             |                       | ISE                | MSE |     |      |      |       |
| CSEL404     | Value Education (UHV) | --                 | --  | --  | 50   | --   | 50    |

**Program Outcomes addressed:**

1. PO1: Engineering knowledge
2. PO2: Problem Analysis
3. PO3: Design/Development of Solutions
4. PO4: Conduct investigations of complex problems
5. PO5: Engineering Tool Usage
6. PO6: The Engineer and The World
7. PO7: Ethics
8. PO8: Individual and Collaborative Team work
9. PO9: Communication
10. PO10: Project Management & Finance
11. PO11: Life-long learning

**Course Objectives:**

1. **To introduce the fundamental concepts of human values**, including intrinsic and extrinsic values, and their relevance to personal and professional development in the context of IT engineering.
2. **To explore the principles of Universal Human Values (UHV)**, emphasizing self-awareness, self-exploration, and the application of tools like the JOHARI window and SWOT analysis in the IT profession.
3. **To study the different levels of harmony**—within oneself, in the family, society, and nature—and apply these concepts to achieve a balanced and fulfilling life, especially in the fast-paced IT industry.
4. **To comprehend the key aspects of professional ethics in IT**, including ethical standards, work ethics, and moral issues such as data privacy, cybersecurity, and AI ethics.
5. **To develop foundational values** such as integrity, impartiality, nonpartisanship, and objectivity, and cultivate empathy, tolerance, and compassion in both personal and professional contexts, particularly in IT-related decision-making.
6. **To integrate human values into IT practices**, focusing on ethical decision-making, sustainable technology development, and responsible innovation.

### Course Outcomes:

After successful completion of the course, students will be able to:

1. **Understand and Explain** (*Understand*) the basic concepts of human values and their significance in personal and professional contexts, particularly in the IT industry.
2. **Explore and Internalize** (*Apply*) human values to guide personal behavior and professional conduct in IT roles such as software development, data analysis, and cybersecurity.
3. **Analyze and Apply** (*Analyze & Apply*) the concept of harmony at various levels of existence to achieve a balanced life, even in high-pressure IT environments.
4. **Identify and Evaluate** (*Analyze & Evaluate*) ethical issues in the IT profession, including data privacy, cybersecurity, AI ethics, and intellectual property rights, using appropriate ethical theories and standards.
5. **Demonstrate and Uphold** (*Apply & Evaluate*) integrity and ethical principles in professional and public service contexts, fostering empathy and compassion in IT projects that impact society.
6. **Integrate and Implement** (*Create & Apply*) human values into IT practices, ensuring that technology development aligns with ethical, social, and environmental considerations.

| Module No. | Unit No. |   | LO       |
|------------|----------|---|----------|
| 1.0        |          | <b>Introduction to Human Values and Their Relevance in IT</b>   | LO1      |
|            | 1.1      | Definition, Intrinsic & Extrinsic values, Shalom Schwartz's Theory of Basic Human Values, Value education: Need, Basic Guidelines and Scope, Self-exploration, Happiness and Prosperity, Harmony, Self-awareness: JOHARI window and SWOT analysis | LO1      |
|            | 1.2      | Ethical Challenges in IT: Data privacy, cybersecurity, AI ethics, and intellectual property rights  | LO4      |
| 2.0        |          | <b>Understanding Human Beings and Harmony at Various Levels of Existence</b>  | LO3      |
|            | 2.1      | Human beings as a combination of the conscious 'I' and material body, Abraham Maslow's Hierarchy of Needs, Classification between I & Body, Co-existence, Harmony in Self: Swasthya and Sanyama   | LO3      |
|            | 2.2      | Harmony in the Family -- Understanding Values in Human Relationships, Differentiation in relationships, Values in relationships   | LO3      |
|            | 2.3      | Harmony in the Society -- From Family order to World Family Order, Comprehensive Human Goal, Harmony in Nature -- Understanding the Interconnectedness and Mutual Fulfilment, Understanding the Four Orders of Nature                             | LO3, LO6 |

| <b>Module No.</b> | <b>Unit No.</b> |  | <b>LO</b>     |
|-------------------|-----------------|--|---------------|
| <b>3.0</b>        |                 | <b>Professional Ethics in IT</b>   | LO4           |
|                   | <b>3.1</b>      | Definition, Characteristics, Profession, Professionalism, Morality, Moral issues in the IT profession, Understanding Ethics, Ethical Standards, Work Ethics, Engineering Ethics  | LO4           |
|                   | <b>3.2</b>      | Types of Inquiries, Kohlberg's Theory, Heinz Dilemma, Gilligan's Theory, and Ethical Theories  | LO4           |
|                   | <b>3.3</b>      | Ethical Challenges in IT: Data privacy, cybersecurity, AI ethics, and intellectual property rights   | LO4           |
| <b>4.0</b>        |                 | <b>Ethics, Integrity, and Aptitude in IT</b>   | LO5           |
|                   | <b>4.1</b>      | Essence, determinants, and consequences of ethics in human actions, Dimensions of ethics, Ethics in private and public relationships   | LO5           |
|                   | <b>4.2</b>      | Key contributions from Indian and global moral thinkers and philosophers, emphasizing integrity, impartiality, and non-partisanship in professional settings   | LO5           |
|                   | <b>4.3</b>      | Upholding objectivity and dedication to public service, Cultivating empathy, tolerance, and compassion, with a focus on their application in IT and public welfare   | LO5           |
| <b>5.0</b>        |                 | <b>Understanding Harmony in Nature and Sustainable IT Practices</b>  | LO6           |
|                   | <b>5.1</b>      | Concept of harmony in Nature: Meaning of harmony in nature, Disharmony with Nature -- causes, Implications of disharmony with nature   | LO6           |
|                   | <b>5.2</b>      | Maintaining harmony with nature: Harmony through mutual fulfilment of the four orders in nature, Harmony through symbiotic relationship with nature, Achieving competence in maintaining harmony with nature in professional life      | LO6           |
|                   | <b>5.3</b>      | Sustainable IT Practices: Green computing, energy-efficient algorithms, and eco-friendly technology development  | LO6           |
| <b>6.0</b>        |                 | <b>Practicum Project -- Community Engagement and IT for Social Good</b>  | LO2, LO5, LO6 |
|                   | <b>6.1</b>      | Students carry out a community engagement project to benefit the local community through IT-based initiatives (e.g., developing apps for social causes, organizing digital literacy camps, or creating awareness about cybersecurity). | LO2, LO5, LO6 |
|                   | <b>6.2</b>      | Students write a reflective report on how the understanding of universal human values has been integrated into their IT project.   | LO5, LO6      |

### Course Assessment:

#### Internal Assessment Method (With Rubrics)

The internal assessment will consist of **Continuous Internal Assessment (CIAP) = 50 marks** based on **Assignments, Case Studies, Presentations, and Practicum Projects**.

| Assessment Component                      | Weightage (%) | Evaluation Criteria (Rubrics)  |
|---|---------------|--|
| <b>Assignment on Human Values</b>         | 20%           | <ul style="list-style-type: none"> <li>- Excellent (5): Demonstrates deep understanding with real-life examples</li> <li>- Good (4): Good understanding with relevant examples</li> <li>- Satisfactory (3): Basic understanding with minimal examples</li> <li>- Needs Improvement (2): Partial understanding with errors</li> <li>- Poor (1): Little to no understanding</li> </ul> |
| <b>Case Study on Ethical Issues in IT</b> | 20%           | <ul style="list-style-type: none"> <li>- Excellent (5): In-depth analysis with ethical theories and solutions</li> <li>- Good (4): Covers major ethical aspects with examples</li> <li>- Satisfactory (3): Identifies ethical concerns with some analysis</li> </ul>   |

|   |     |  |
|---|-----|--|
|   |     | - Needs Improvement (2): Limited understanding with minor errors<br>- Poor (1): Lacks analysis and ethical reasoning   |
| <b>Presentation on Sustainability in IT</b>         | 20% | - Excellent (5): Well-structured, engaging, innovative ideas<br>- Good (4): Clear and logical presentation with good insights<br>- Satisfactory (3): Covers major points but lacks depth<br>- Needs Improvement (2): Some points missing, lacks clarity<br>- Poor (1): Unstructured, lacks coherence |
| <b>Reflection Report on Practicum Project</b>       | 20% | - Excellent (5): Thoughtful reflection, well-articulated impact<br>- Good (4): Covers personal learning and impact clearly<br>- Satisfactory (3): General reflection with limited depth<br>- Needs Improvement (2): Superficial understanding<br>- Poor (1): Minimal effort, lacks insight           |
| <b>Participation in Discussion &amp; Engagement</b> | 20% | - Excellent (5): Actively participates, provides insightful contributions<br>- Good (4): Engaged, contributes relevant thoughts<br>- Satisfactory (3): Participates but with limited contribution<br>- Needs Improvement (2): Rarely participates, minimal effort<br>- Poor (1): No participation    |

### **Examples of Practicum Projects for Community Engagement and IT for Social Good**

The practicum project aims to encourage students to apply **Universal Human Values (UHV)** and **Ethics in IT** to solve real-world societal challenges. Below are some project ideas along with explanations of how they integrate **human values and ethics**:

#### **Digital Literacy Program for Underprivileged Communities**

**Objective:** Create and conduct workshops to educate marginalized communities about basic computer skills, cybersecurity awareness, and digital payments.

#### **Implementation:**

- Design an easy-to-understand curriculum on digital literacy.
- Conduct workshops/webinars in rural schools or community centers.
- Develop a simple mobile/web application for learning digital skills.
- Educate participants about data privacy, cyber threats, and ethical internet use.

#### **Human Values & Ethics Integration:**

- **Empathy & Compassion** – Address digital divide and empower underprivileged individuals.
- **Integrity & Responsibility** – Teach ethical use of technology and responsible online behavior.

- **Public Welfare** – Ensure safe digital access for vulnerable communities.

### **AI-Based Cyberbullying Detection for Schools & Colleges**

**Objective:** Develop an AI model to identify cyberbullying in chat messages and social media posts, ensuring a safer digital environment.

**Implementation:**

- Collect and train data on cyberbullying-related words & phrases.
- Implement a Natural Language Processing (NLP)-based chatbot to detect abusive content.
- Educate students on ethical social media behavior and reporting mechanisms.
- Partner with schools/colleges to deploy the model in their IT systems.

**Human Values & Ethics Integration:**

- **Respect & Non-Partisanship** – Encourage online respectful interactions.
- **Fairness & Objectivity** – Ensure non-biased AI in content moderation.
- **Safety & Privacy** – Protect users' personal data and identity.

### **Green Computing Awareness & E-Waste Management App**

**Objective:** Develop an app to educate users on sustainable IT practices and provide an e-waste collection service.

**Implementation:**

- Create an app that guides users on green computing practices.
- Provide nearby e-waste collection centers and reward users for recycling.
- Conduct IT industry awareness campaigns on energy-efficient computing.
- Promote the use of renewable energy in data centers.

**Human Values & Ethics Integration:**

- **Environmental Sustainability** – Encourage eco-friendly IT solutions.
- **Social Responsibility** – Spread awareness about ethical e-waste disposal.
- **Harmony in Nature** – Minimize IT sector's negative impact on nature.

### **Cybersecurity Awareness Chatbot for Senior Citizens**

**Objective:** Build a WhatsApp or Telegram chatbot that assists senior citizens in identifying and avoiding online scams, phishing, and frauds.

**Implementation:**

- Develop an AI chatbot that explains common online scams.
- Create step-by-step tutorials on safe internet banking and social media usage.
- Partner with local community centers and NGOs to spread awareness.
- Ensure chatbot provides real-time support and automated alerts.

**Human Values & Ethics Integration:**

- **Compassion & Empathy** – Assist vulnerable groups in safe internet use.
- **Integrity & Awareness** – Promote honest and secure online transactions.
- **Public Welfare** – Reduce cyber frauds targeting elderly people.

### **AI Ethics Awareness in IT Companies & Colleges**

**Objective:** Develop an interactive website or mobile app to educate IT professionals and students on ethical AI usage and biases in AI systems.

**Implementation:**

- Provide interactive case studies on AI bias, privacy, and ethical dilemmas.
- Conduct quiz-based learning to test AI ethical understanding.
- Collaborate with IT professionals and faculty to design real-world scenarios.
- Ensure alignment with global AI ethics standards (e.g., IEEE, EU AI Act).

**Human Values & Ethics Integration:**

- **Integrity & Fairness** – Ensure unbiased AI algorithms.
- **Public Interest** – Educate developers on responsible AI implementation.
- **Transparency** – Promote explainable and fair AI decision-making.

### **Mobile App for Volunteer & Donation Matching**

**Objective:** Develop a volunteer-matching platform that connects IT professionals and students with social organizations in need of technical assistance.

**Implementation:**

- Allow users to register their skills (app development, cybersecurity, etc.).
- Connect them with NGOs or community projects that require IT support.
- Enable secure crowdfunding and donation tracking for transparency.
- Promote projects focused on digital inclusion and education.

**Human Values & Ethics Integration:**

- **Social Responsibility** – Encourage IT professionals to give back to society.
- **Transparency & Trust** – Maintain fair donation tracking.
- **Empathy & Compassion** – Align IT skills with community development.

### **Ethical Hacking & Cybersecurity Training for Students**

**Objective:** Conduct a hands-on ethical hacking workshop to educate students on ethical penetration testing and cybersecurity best practices.

**Implementation:**

- Develop training modules on ethical hacking, cryptography, and network security.
- Conduct capture-the-flag (CTF) cybersecurity challenges for hands-on learning.
- Educate students on responsible disclosure of vulnerabilities.
- Partner with cybersecurity firms for internships and projects.

**Human Values & Ethics Integration:**

- **Ethical Responsibility** – Train IT students to prevent cyber crimes.
- **Accountability** – Promote responsible ethical hacking practices.
- **Public Safety** – Improve cybersecurity awareness in college networks.

### **AI-Powered Sign Language Recognition System**

**Objective:** Develop an AI-based sign language recognition system to help hearing-impaired

individuals communicate using real-time gesture recognition.

**Implementation:**

- Train a machine learning model on Indian Sign Language (ISL).
- Develop a mobile/web app that converts sign language gestures into text/speech.
- Partner with special education institutes and NGOs for deployment.
- Ensure open-source availability for future development.

**Human Values & Ethics Integration:**

- **Inclusion & Accessibility** – Bridge communication gaps for disabled individuals.
- **Fairness & Transparency** – Ensure AI is unbiased across different sign languages.
- **Social Welfare** – Enhance digital accessibility for differently-abled people.

- **Project Submission & Reflection Report**

After completing the practicum project, students will submit a reflective report covering:

1. **Project Objective & Problem Statement**
2. **Implementation Details & Challenges Faced**
3. **Human Values & Ethics Integrated**
4. **Impact Assessment & Learning Outcomes**
5. **Future Improvements & Scalability**

**Evaluation Rubric:**

- **Excellent (5):** Clear objectives, strong ethical integration, significant social impact.
- **Good (4):** Good ethical integration, minor improvement areas.
- **Satisfactory (3):** Basic implementation lacks depth in ethical application.
- **Needs Improvement (2):** Minimal social impact, weak ethical connection.
- **Poor (1):** Unclear project execution, little relevance to human values.

| CSEM401     | Mini Project 1B | --                 | --  | --  | 25   | 25   | 50    |

**Program Outcomes addressed:**

1. PO1: Engineering knowledge .
2. PO2: Problem Analysis.
3. PO3: Design/Development of Solutions .
4. PO4: Conduct investigations of complex problems.
5. PO5: Modern Tool Usage.
6. PO6: The Engineer and The World.
7. PO7: Ethics.
8. PO8: Individual and Collaborative Team Work
9. PO9: Communication..
10. PO10: Project Management & Finance.
11. PO11: Life-long learning.

**Objectives**

1. To acquaint with the process of identifying the needs and converting it into the problem.
2. To familiarize the process of solving the problem in a group.
3. To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
4. To inculcate the process of Self-Learning and research.

**Outcome:** Upon completion of this course, learners will be able to

1. Identify problems based on societal /research needs.
2. Apply Knowledge and skill to solve societal problems in a group.
3. Develop interpersonal skills to work as a member of a group or leader.
4. Deduce the proper inferences from available results through theoretical/ experimental /simulations.
5. Analyze the impact of solutions in societal and environmental context for sustainable development.
6. Apply standard norms of engineering practices.
7. Develop skills in written and oral communication.
8. Illustrate capabilities of Self-Learning in a group, which leads to life-long learning.
9. Explain project management principles during project work.

### **Guidelines for Mini Project**

1. Students shall form a group of 3 to 4 students, while forming a group shall not be allowed for less than three or more than four students, as it is a group activity.
2. Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
3. Students shall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
4. A logbook to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
5. Faculty supervisors may give input to students during mini project activity; however, focus shall be on Self-Learning.
6. Students in a group should understand problems effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
7. Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
8. The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
9. With the focus on Self-Learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
10. However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case-by-case basis.

### **Guidelines for Assessment of Mini Project: Term Work**

- Term work will be assessed as Continuous Internal Assessment Practical (CIAP).
- The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of Term work marks for both semesters shall be as below.
  1. Marks awarded by guide/supervisor based on logbook: 10
  2. Marks awarded by review committee 10
  3. Quality of Project report 05

The review/progress monitoring committee may consider the following points for assessment based on either one year or half year project as mentioned in general guidelines.

**One-year project:**

- In the first semester the entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on the presentation given by the students' group.
  - First shall be for finalization of problem
  - Second shall be on finalization of proposed solution of problem.
- In the second semester the expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.
  - The first review is based on the readiness of building a working prototype to be conducted.
  - Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

**Half-year project:**

- In this case in one semester students' group shall complete project in all aspects including,
  - Identification of need/problem
  - Proposed final solution
  - Procurement of components/systems
  - Building prototype and testing
- Two reviews will be conducted for continuous assessment,
  - First shall be for finalization of problem and proposed solution
  - Second shall be for implementation and testing of solution.

**Assessment criteria of Mini Project**

**Mini Project** shall be assessed based on the following criteria;

1. Quality of survey/ need identification.
  2. Clarity of Problem definition based on need.
  3. Innovativeness in solutions.
  4. Feasibility of proposed problem solutions and selection of best solution
  5. Cost effectiveness.
  6. Societal impact.
  7. Innovativeness.
  8. Cost effectiveness and Societal impact.
  9. Full functioning of working model as per stated requirements.
  10. Effective use of skill sets.
  11. Effective use of standard engineering norms.
  12. Contribution of an individual's as member or leader.
  13. Clarity in written and oral communication.
- In **one year, project**, first semester evaluation may be based on the first six criteria's and the remaining may be used for second semester evaluation of performance of students in mini project.

- In the case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

**Guidelines for Assessment of Mini Project Practical/Oral Examination:**

- The report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organization's having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

**Mini Project** shall be assessed based on the following points.

1. Quality of problem and Clarity
2. Innovativeness in solutions
3. Cost effectiveness and Societal impact
4. Full functioning of working model as per stated requirements
5. Effective use of skill sets
6. Effective use of standard engineering norms
7. Contribution of an individual's as member or leader
8. Clarity in written and oral communication
- 9.

**Oral & Practical exam (ESEP)**

Based on the entire syllabus of CEM401 Mini Project End Semester Examination Practical (ESEP) will be conducted.

**Internal Assessment:**

**For 03 credit - 80 marks subject**

Assessment consists of one Mid Semester Examination (MSE) of 20 marks and In Semester Examination (ISE) of 20 marks. The MSE to be conducted based on 50 % syllabus with duration of one hour.

**For 02 credit - 60 marks subject**

Assessment consists of one Mid Semester Examination (MSE) of 15 marks and In Semester Examination (ISE) of 15 marks. The MSE to be conducted based on 50 % syllabus with duration of one hour.

**In Semester Examination (ISE)**

**SE 20 marks = 05 marks attendance +15 marks for Activities.**

**ISE 15 marks = 05 marks attendance +10 marks for Activities.**

The Rubrics for activities are as follows. The activities will be decided by course in charge and approved by HoD.

| Sr. No | Rubrics  | Marks    |
|--------|--|----------|
| 1      | Multiple Choice Questions (Quiz)   | 05 Marks |
| 2      | Literature review of papers/journals   | 05 Marks |
| 3      | Participation in event/ workshop/ talk / competition followed by small report and certificate of participation relevant to the subject | 05 Marks |
| 4      | Extra Experiments/ Virtual Lab   | 05 marks |
| 5      | Content beyond syllabus presentation   | 05 marks |
| 6      | Wins in the event/competition/hackathon pertaining to the course   | 10 Marks |
| 7      | Case study, Presentation, group discussion, technical debate on recent trends in the said course                                       | 10 Marks |
| 8      | NPTEL/ Coursera/ Udemy/any MOOC Certificate course for 4 weeks or more   | 10 Marks |
| 9      | Creating Proof of Concept  | 10 Marks |
| 10     | Mini Project /   | 10 Marks |
| 11     | GATE Based Assignment test/Tutorials etc   | 10 Marks |

\*For sr.no.8, the date of certification exam should be within the term and in case a student is unable complete the certification, the grading has to be done accordingly.
