Operating System (NIPU Sem- 6-7)		Table of Contents			
2.4.4(B)	Byte Semaphores	2-14	3.1.2(B)	Race Condition	3-4
2.4.5	Thread States	2-14	3.2	Mutual Exclusion	3-5
2.5	Thread Programming using pthreads	2-14	3.2.1	Requirements for Mutual Exclusion	3-5
2.5.1	Pthread Thread API	2-14	3.2.2	Mutual Exclusion Conditions	3-6
2.5.2	Thread Creation	2-15	3.2.3	Hardware Support	3-6
2.5.3	Thread Termination	2-15	3.2.4	Operating System Support	3-7
2.5.4	Thread Management	2-15	3.2.4(A)	Semaphores and Mutex	3-7
2.5.4(A)	Thread join	2-16	3.2.4(B)	Reader-Writer	3-8
2.5.4(B)	Mutex Variables	2-16	3.2.5	Programming Language Support (Monitors)	3-10
2.5.4(C)	Condition Variable	2-21	3.3	Classical Synchronization Problems	3-11
2.6	Scheduling	2-25	3.3.1	Reader-Writer Problem	3-11
2.6.1	Scheduling Queues and Schedulers	2-26	3.3.2	Producer and Consumer Problem	3-13
2.6.1(A)	Long-Term Scheduler	2-26	3.3.2(A)	Producer-Consumer Problem Using Semaphores	3-14
2.6.1(B)	Short-Term Scheduler	2-26	3.3.3	Interprocess Communication (IPC)	3-16
2.6.1(C)	Medium-Term Scheduler	2-27	3.3.4	UNIX IPC	3-17
2.6.1(D)	Comparison between Long Term, Short Term and Medium Term Schedulers	2-27	3.4	Deadlock	3-17
2.6.2	Types of Scheduling	2-27	3.4.1	Principles of Deadlock	3-17
2.7	Scheduling Algorithms	2-28	3.4.2	Strategies to Deal with Deadlock	3-18
2.7.1	Scheduling Criteria	2-28	3.4.2(A)	The Dining Algorithm	3-18
2.7.2	Scheduling Algorithms	2-29	3.4.2(B)	Necessary Conditions	3-18
2.8	Examples on Scheduling Algorithms	2-34	3.4.3	Deadlock Modeling (Resource Allocation Graphs)	3-19
2.9	Thread Scheduling	2-31	3.4.4	Deadlock Prevention	3-20
2.9.1	Load Sharing	2-31	3.4.5	Deadlock Avoidance	3-22
2.9.2	Busy Scheduling	2-32	3.4.5(A)	Safe and Unsafe States	3-22
2.9.3	Optimal Processor Assignment	2-32	3.4.5(B)	Deadlock Avoidance Algorithms	3-23
2.9.4	Dynamic Scheduling	2-32	3.5	Solved Examples on Deadlock Avoidance	3-26
Chapter 3 : Concurrency Control 3-1 to 3-38			3.6	Deadlock Detection and Recovery	3-31
Syllabus : Process/thread Synchronization and Mutual Exclusion - Principles of Concurrency; Requirements for Mutual Exclusion; Mutual Exclusion; Hardware Support; Operating System Support (Semaphores and Mutex); Programming Language Support (Monitors);			3.6.1	Deadlock Detection	3-31
Classical synchronization problems - Readers/Writers Problem, Producer and Consumer problem, interprocess communication (Pipe, shared memory, system V);			3.6.2	Deadlock Recovery	3-32
Deadlock - Principles of Deadlock; Deadlock Modeling; Strategies to deal with deadlock: The Dining Algorithm; Deadlock Prevention; Deadlock Avoidance; Deadlock detection and recovery; An Integrated Deadlock Strategy; Example: Dining Philosopher Problem.			3.7	An Integrated Deadlock Strategy	3-34
3.1	Process/Thread Synchronization and Mutual Exclusion	3-1	3.8	Dining Philosopher Problem	3-34
3.1.1	Principles of Concurrency	3-1	Chapter 4 : Memory Management 4-1 to 4-44		
3.1.2	Process/Thread Synchronization	3-3	Syllabus : Memory Management - Memory Management Requirements; Memory Partitioning: Fixed Partitioning, Dynamic Partitioning; Buddy System; Allocation; Paging; Segmentation;		
3.1.2(A)	Critical Section Problem	3-3	Virtual Memory (Hardware and Control Structures; Operating System Software)		
			4.1	Introduction of Memory Management	4-1
			4.1.1	Memory Management Requirements	4-2
			4.2	Memory Partitioning	4-3
			4.2.1	Monoprogramming	4-3
			4.2.2	Multiprogramming	4-4
			4.2.2(A)	Multiprogramming with Fixed and Variable Partitions (Contiguous Allocation)	4-4
			4.2.2(B)	Difference between Internal and External Fragmentation	4-5

Operating System (OS/161, Part 2-11)		Table of Contents			
4.2.1	Virtual Memory Techniques	4.2	4.2.1	Operating System Design Issues	4.2
4.2.2	Cache	4.3	4.2.1(A)	Design Structures	4.3
4.3	Cache Coherence	4.4	4.2.1(B)	Logical Structure of the OS System	4.4
4.4	Cache	4.4	4.2.1(C)	IO Buffering	4.4
4.5	Cache	4.5	4.2.1(A)	Single Buffer	4.5
4.6	Cache	4.10	4.2.1(B)	Double Buffer	4.5
4.7	Memory Allocation Strategies	4.10	4.2.1(C)	Complex Buffer	4.5
4.8	Ready System	4.12	4.2.1(D)	The Use of Buffing	4.5
4.9	Paging	4.15	4.2	Disk Scheduling	4.5
4.9.1	Basic Operation of Paging	4.15	4.2.1	Disk Scheduling Algorithms	4.10
4.9.2	Memory Protection and Sharing	4.15	4.2.1(A)	FIFO Scheduling Algorithm	4.10
4.1.1	Translation Look Aside Buffer (TLB)	4.16	4.2.1(B)	Shortest Seek Time First (SSTF) Scheduling Algorithm	4.11
4.2.2	Effect of Page Size on Performance	4.16	4.2.1(C)	SCAN Scheduling Algorithm	4.11
4.3.3	Hardware Support for Paging	4.16	4.2.1(D)	G-SCAN Scheduling	4.12
4.10	Segmentation	4.18	4.2.1(E)	LOOK Scheduling	4.12
4.10.1	Difference between Paging and Segmentation	4.20	4.2	Some Examples on Disk Scheduling Algorithms	4.13
4.11	Segmentation with Paging	4.23	4.2	Disk Cache	4.23
4.12	Virtual Memory	4.23	4.2	File Management	4.23
4.12	Hardware and Control Structures	4.23	4.2.1	Files and File Systems	4.23
4.12.1	Demand Paging	4.23	4.2.2	File Naming	4.24
4.12.2	Thrashing	4.24	4.2.3	File Structure	4.26
4.12.3	Locality (Working Set Model)	4.24	4.2.4	File Types	4.28
4.12.4	Structure of Page Tables	4.25	4.2.5	File Attributes	4.27
4.12.4(A)	Hierarchical Paging	4.25	4.2.6	File Operations	4.28
4.12.4(B)	Hashed Page Table	4.26	4.2	File Organization and Access	4.29
4.12.4(C)	Inverted Page Table	4.27	4.2.7	File Access	4.29
4.14	Operating System Software	4.28	4.2.8	File Organization	4.29
4.14.1	Page Replacement Strategies	4.28	4.2	File Directories	4.29
4.16	Examples on Page Replacement Algorithms	4.30	4.2.1	Single-Level Directory Systems	4.29
Chapter 5: Input/output and File Management			4.2.2	Two-level Directory Systems	4.31
		4.1 to 4.48	4.2.3	Hierarchical Directory Systems	4.31
Syllabus : IO Management and Disk Scheduling + IO Devices, Organization of the IO Function, Operating System Design Issues, IO Buffering, Disk Scheduling (FIFO, SSTF, SCAN, G-SCAN, LOOK, LOOKS), Disk Cache, File Management : Overview, File Organization and Access, File Operations, File Sharing, Record Blocking, Secondary Storage Management			4.2	File Sharing	4.32
5.1	IO Management and Disk Scheduling	4.1	4.2.1	Access Rights	4.32
5.1.1	Overview	4.1	4.2.2	Simultaneous Access	4.32
5.1.2	IO Devices	4.1	4.2	Record Blocking	4.32
5.1.3	Organization of the IO Function	4.2	4.10	Secondary Storage Management	4.37
			4.10.1	File Allocation	4.37
			4.10.2	Pre-allocation versus Dynamic Allocation	4.37
			4.10.3	Fixed Size	4.37
			4.11	File Allocation Methods	4.38
			4.11.1	Contiguous Allocation	4.38
			4.11.2	Linked List Allocation	4.39
			4.11.3	Linked List Allocation using a Table in Memory	4.40

UNIT I	
Chapter 1: Overview of Operating System	1-1 to 1-18
Syllabus: Operating System, OS Concepts, Components of Operating System, Operations of OS, Program Management, Resource Management, Security and System, Types of OS, User Interface, System, User Interface, Different Types of Operating System, Batch Operating System, Multi-Programmed Time Shared OS, Multiprocessor Systems, Distributed Systems, Real Time systems, Mobile OS (Android, iOS), Embedded OS (Linux OS, VxWorks, QNX Based OS, Windows, Linux)	
1.1 Introduction to Operating System	1-1
1.1.1 Types of Operating System	1-1
1.1.2 Components of Operating System	1-2
1.1.3 Operations of Operating System	1-3
1.1.3.1 Batch Mode Operation	1-4
1.1.3.2 Time	1-4
1.1.4 Program Management	1-5
1.1.5 Resource Management	1-7
1.1.6 Security and Protection	1-7
1.1.6.1 Security and its Goals	1-7
1.1.6.2 Goals of Protection	1-8
1.1.6.3 Protection Domain	1-9
1.1.6.4 Access Matrix	1-9
1.1.7 Different Views of Operating System	1-10
1.1.7.1 Applications View	1-10
1.1.7.2 Users View	1-11
1.1.7.3 System View	1-11
1.1.7.4 Implementation View	1-11
1.2 Different Types of Operating Systems	1-11
1.2.1 Batch Operating System	1-12
1.2.2 Multiprogrammed Operating Systems	1-13
1.2.3 Time Shared Operating Systems	1-13
1.2.4 Multiprocessor systems	1-14
1.2.5 Mainframe Operating Systems	1-14
1.2.6 Distributed Systems	1-15
1.2.6.1 Definition	1-15
1.2.6.2 Motivation	1-15
1.2.6.3 Types of Distributed Operating Systems	1-16
1.2.7 Real Time Systems	1-19
1.2.8 Mobile OS	1-20
1.2.8.1 Android OS	1-20
1.2.8.2 Android Architecture	1-21
1.2.8.3 iOS	1-21
1.2.8.4 Distributed Network Time Sharing System and Real Time System	1-22
1.2.8.5 Difference between Monitoring, Printing and Mailboxing	1-24
1.3 Command Line Based Operating System	1-24
1.3.1 DOS (Disk Operating System)	1-24
1.3.1.1 Directory Structure in DOS	1-25
1.3.1.2 File Structure in DOS	1-26
1.3.1.3 Internal and External Commands in DOS	1-27
1.3.2 UNIX	1-27
1.3.2.1 UNIX Goals	1-27
1.3.2.2 Interface to UNIX	1-28
1.3.2.3 The Unix Shell	1-28
1.3.2.4 UNIX utility programs	1-29
1.3.2.5 Information File, Process Memory Management Overview	1-29
1.4 GUI Based OS	1-31
1.4.1 Windows Family	1-31
1.4.1.1 Windows System Components	1-33
1.4.2 Linux	1-34
1.4.2.1 History of Linux	1-34
1.4.2.2 Features of Linux	1-35
1.4.2.3 Components of Linux	1-36
UNIT II	
Chapter 2: Services and Components of Operating System	2-1 to 2-22
Syllabus: Different Services of Operating System, System Calls, Concept, Types of system call, OS Components, Process Management, Main Memory Management, File Management, IO System Management, Secondary Storage Management, Use of Operating system Tools, User Management, Security policy, Device management, Performance Monitor, Trace Scheduler.	
2.1 Different Services of Operating System	2-1
2.2 System Calls	2-2
2.2.1 Concept	2-2
2.2.2 Types of System Calls	2-3
2.2.3 Some Examples of System Calls	2-4
2.3 Operating System Components	2-5

4.16	Operating System (MSB11)	4-16
4.17	Example on Disked Access	4-16

UNIT V

Chapter 5: Memory Management 5-1 to 5-28

Syllabus: Basic Memory Management, Partitioning, Fixed and Variable Size Space management Techniques, Binary Linked List, Virtual Memory, Introduction to Paging, Segmentation, Segmentation and Page-Fault, Page Replacement Algorithms, FIFO, LRU, DVMA

5.1	Basic Memory Management	5-1
5.1.1	Background	5-1
5.1.2	Non-programming	5-1
5.1.3	Multiprogramming	5-2
5.1.4	Multiprogramming with Fixed and Variable Partitions	5-2
5.1.5	Fragmentation	5-2
5.1.6	Free Space Management Techniques	5-2
5.2	Virtual Memory	5-6
5.2.1	Introduction to Paging	5-7
5.2.1.1	Basic Operation	5-7
5.2.1.2	Memory Protection and Sharing	5-8
5.2.2	Segmentation	5-9
5.2.3	Page Fault	5-10
5.2.3.1	Demand Paging	5-10
5.2.3.2	Page Fault and Instruction Restart	5-13
5.3	Page Replacement Algorithms	5-14
5.3.1	FIFO Algorithm	5-14

5.3.2	Last Recently Used (LRU) Algorithm	5-15
5.3.3	Optimal Page Replacement Algorithm	5-16

UNIT VI

Chapter 6: File Management 6-1 to 6-18

Syllabus: File Concepts, Attributes, Operations, Types and File System Structure, Access Methods, Backups, Delet, Swapping, File Allocation Methods, Conventional, Linked, and Index Directory Structure, Single Level, Two level, Tree Structure, Directory, Disk Organization and Disk structure, Physical Structure, Logical Structure, RAID Structure of Disk, RAID levels 0 to 6

6.1	File Concepts	6-1
6.1.1	File Attributes	6-2
6.1.2	File Operations	6-2
6.1.3	File Types	6-3
6.1.4	File System Structure	6-4
6.2	File Access Methods	6-6
6.3	File Allocation Methods	6-7
6.4	Directory Structure	6-10
6.4.1	Single Level Directory Systems	6-10
6.4.2	Two-level Directory Systems	6-11
6.4.3	Tree Structure Directory Systems	6-12
6.5	Disk Organization and Disk structure	6-13
6.5.1	Physical Structure	6-13
6.5.2	Logical Structure	6-14
6.5.3	RAID Structure of Disk	6-15
6.5.4	RAID levels 0 to 6	6-17

Module 1

Chapter 1: Introduction to Distributed System		1.1 to 1.40
1.1	Introduction	1.1
1.2	Examples of Distributed System	1.2
1.2.1	Internet	1.3
1.2.2	Browser	1.3
1.2.3	Mobile and Ubiquitous Computing	1.3
1.3	Resource Sharing and the Web	1.4
1.3.1	World Wide Web (WWW)	1.4
1.4	Issues and Goals	1.5
1.4.1	Heterogeneity	1.5
1.4.2	Making Resource Available	1.5
1.4.3	Distribution Transparency	1.6
1.4.4	Scalability	1.7
1.4.5	Openness	1.7
1.5	Types of Distributed Systems	1.9
1.5.1	Distributed Computing Systems	1.10
1.5.1(A)	Client Computing Systems	1.10
1.5.1(B)	Grid Computing Systems	1.11
1.5.2	Distributed Information Systems	1.12
1.5.2(A)	Transaction Processing Systems	1.12
1.5.3	Enterprise Application Integration	1.13
1.5.4	Distributed Pervasive Systems	1.13
1.6	Distributed System Models	1.14
1.6.1	Architectural Models	1.15
1.6.1(A)	Software Layers	1.15
1.6.1(B)	System Architecture	1.16
1.6.1(C)	Variants in Basic Client Server Model	1.17
1.6.1(D)	Interfaces and Objects	1.18
1.6.1(E)	Design Requirements for Distributed Architectures	1.20
1.6.2	Fundamental Models	1.20
1.6.2(A)	Interaction Model	1.22
1.6.2(B)	Failure Model	1.24
1.6.2(C)	Security Model	1.24
1.7	Hardware Concepts	1.25
1.7.1	Multiprocessors	1.25
1.7.2	Homogeneous Multiprocessor Systems	1.27
1.7.3	Heterogeneous Multiprocessor Systems	1.27

1.9	Network Concepts	1.9
1.10	Distributed Operating Systems	1.10
1.10.1	Network Operating Systems	1.10.1
1.10.2	Middleware	1.10.2
1.10.3	Thinning Middleware	1.10.3
1.10.4	Models of Middleware	1.10.4
1.11	Services Offered by Middleware	1.11
1.12	Client Server Model	1.12
1.12.1	Client and Servers	1.12.1
1.12.2	Application Layering	1.12.2
1.12.3	Client Server Architecture	1.12.3

Module 2

Chapter 2.1. Communication 2.1 to 2.25

2.1	Layered Protocols	2.1
2.1.1	Lower Layer Protocols	2.1.1
2.2	Interprocess Communication (IPC)	2.2
2.2.1	Types of Communication	2.2.1
2.2.2	Message Passing Interface	2.2.2
2.3	Remote Procedure Call (RPC)	2.3
2.3.1	RPC Operation	2.3.1
2.3.2	Implementation Issues	2.3.2
2.3.3	Asynchronous RPC	2.3.3
2.3.4	DCE RPC	2.3.4
2.4	Remote Object Invocation	2.4
2.4.1	Distributed Objects (DMI - Remote Method Invocation)	2.4.1
2.5	Message Oriented Communication	2.5
2.5.1	Persistence Synchronicity in Communication	2.5.1
2.5.2	Combination of Communication Types	2.5.2
2.5.3	Message Oriented Transient Communication	2.5.3
2.5.4	Message Oriented Persistent Communication	2.5.4
2.6	Stream Oriented Communication	2.6
2.6.1	Continuous Media Support	2.6.1
2.6.2	Streams and Quality of Service (QoS)	2.6.2
2.6.3	Stream Synchronization	2.6.3
2.7	Group Communication	2.7
2.7.1	Application Level Multicast	2.7.1
2.7.2	Gossip Based Data Dissemination	2.7.2

Module 3

Chapter 3: Synchronization		3-1 to 3-28
	Clock Synchronization	3-1
3.1	Physical Clocks	3-2
3.2	Global Positioning System (GPS)	3-2
3.3	Clock Synchronization Algorithms	3-3
	Logical Clocks	3-8
3.1	Lamport's Logical Clocks	3-7
3.2	Application of Lamport Timestamp / Total Order Multicasting	3-8
3.3	Vector Clocks	3-9
	Election Algorithms	3-10
3.1	Bully Algorithm	3-11
3.2	Ring Algorithm	3-12
3.3	Election in Wireless Networks	3-14
	Mutual Exclusion	3-14
3.1	Distributed Mutual Exclusion	3-14
3.2	Classification of Mutual Exclusion Algorithms	3-15
3.3	Requirements of Mutual Exclusion Algorithms	3-15
3.4	Performance Measure of Mutual Exclusion Algorithms	3-16
3.5	Performance in Low and High Load Conditions	3-16
3.6	Non-Token Based Algorithms	3-16
3.1	Lamport's Algorithm	3-17
3.2	Bacon-Agrawala's Algorithm	3-18
3.3	Centralized Algorithm	3-19
3.4	Maska's Algorithm	3-20
3.5	Token Based Algorithms	3-20
3.1	Suzuki-Kasami's Broadcast Algorithm	3-21
3.2	Graphical Hierarchical Algorithm	3-22
3.3	Raymond's Tree-Based Algorithm	3-23
3.4	Token Ring Algorithm	3-24
3.5	Comparative Performance Analysis of Algorithms	3-27
3.1	Response Time	3-27
3.2	Synchronization Delay	3-27
	Message Traffic

Chapter 4-1: Resource and Process Management

4.1	Introduction	4-1
4.2	Desirable Features of Global Scheduling Algorithm	4-2
4.3	Task Assignment Approach	4-3
4.4	Load-Balancing Approach	4-4
4.4.1	Classification of Load-Balancing Algorithms	4-4
4.4.2	Issues in Designing Load-Balancing Algorithms	4-7
4.5	Load-Sharing Approach	4-7
4.5.1	Issues in Designing Load-sharing Algorithms	4-8
4.6	Introduction to Process Migration	4-9
4.7	Process Migration	4-9
4.7.1	Desirable Features of Good Process Migration Mechanism	4-10
4.7.2	Process Migration Mechanisms	4-11
4.7.3	Process Migration in Heterogeneous Systems	4-13
4.7.4	Advantages of Process Migration	4-14
4.8	Threads	4-14
4.8.1	Comparison between Process and Thread	4-15
4.8.2	Server Process	4-16
4.8.3	Models for Organizing Threads	4-16
4.8.4	Issues in Designing a Thread Package	4-17
4.8.5	Thread Scheduling	4-17
4.8.6	Implementing a Thread Package	4-19
4.9	Virtualization	4-19
4.9.1	The Role of Virtualization in Distributed Systems	4-19
4.9.2	Architectures of Virtual Machines	4-20
4.10	Clients	4-20
4.10.1	Networked User Interfaces	4-20
4.10.2	Client-Side Software for Distribution Transparency	4-21
4.11	Servers	4-21
4.11.1	General Design Issues	4-21
4.11.2	Server Clusters	4-22
4.11.3	Distributed Servers	4-23
4.12	Code Migration	4-23
4.12.1	Approaches to Code Migration	4-23
4.12.2	Migration and Local Resources	4-24
4.12.3	Migration in Heterogeneous Systems	4-24

Chapter 5: Consistency, Replication and Fault-Tolerance		5-1 to 5-34
5.1	Introduction to Replication and Consistency	5-1
5.1.1	Reasons for Replication	5-1
5.1.2	Replication as Scaling Technique	5-2
5.2	Data-Centric Consistency Models	5-3
5.2.1	Geometric Consistency	5-4
5.2.2	Consistent Ordering of Operations	5-9
5.3	Client-Centric Consistency Models	5-9
5.3.1	Eventual Consistency	5-10
5.3.2	Monotonic Reads	5-10
5.3.3	Monotonic Writes	5-11
5.3.4	Read Your Writes	5-11
5.3.5	Write Follows Reads	5-12
5.4	Replica Management	5-12
5.4.1	Replica Server Placement	5-13
5.4.2	Content Replication and Placement	5-14
5.4.3	Content Distribution	5-15
5.5	Fault Tolerance	5-16
5.5.1	Basic Concepts	5-16
5.5.2	Failure Models	5-17
5.5.3	Failure Masking by Redundancy	5-18
5.6	Process Resilience	5-19
5.6.1	Design Issues	5-20
5.6.2	Failure Masking and Replication	5-22
5.6.3	Agreement in Faulty Systems	5-23
5.6.4	Failure Detection	5-23
5.7	Reliable Client-Server Communication	5-23
5.7.1	Point-to-Point Communication	5-23
5.7.2	RPG Semantics in the Presence of Failures	5-24
5.8	Reliable Group Communication	5-24
5.8.1	Basic Reliable Multicasting Schemes	5-24
5.8.2	Scalability in Reliable Multicasting	5-25
5.8.3	Atomic Multicast	5-25
5.9	Recovery	5-25
5.9.1	Introduction	5-25
5.9.2	Stable Storage	5-25
5.9.3	Checkpointing	5-25
5.9.4	Message Logging	5-25

Contents

<i>Preface</i>	vii
1. Crystal Structure	1
1.1 Introduction	1
1.2 Unit Cell of Diamond	4
1.3 Zinc Blende (ZnS Structure)	6
1.4 NaCl Structure	7
1.5 Hexagonal Closed Packed (HCP) Crystal Structure	8
1.6 Miller Indices of Crystallographic Planes	10
1.7 Miller Indices of Lattice Directions	15
1.8 Interplanar Distance in a Cubic Crystal	16
1.9 X-Rays Diffraction & Bragg's Law	17
1.10 Bragg's Diffractometer	18
1.11 Frankel and Schottky Crystal Defects	20
1.12 Ligancy and Critical Radius Ratio in Ionic Crystals	22
1.13 Liquid Crystal	26
1.14 Liquid Crystal Phases	27
<i>Summary</i>	31
<i>Important Formulae</i>	31
<i>Solved Numericals</i>	32
<i>Exercise</i>	41
2. Quantum Mechanics	42
2.1 Introduction	42
2.2 Wave and Particle Duality of Radiation	42
2.3 De Broglie's Concept of Matter Waves and de Broglie Wavelength	43
2.4 Experimental Verification of de Broglie's Theory of Matter Waves: Diffraction of Material Particles	46
2.5 Properties of Matter Waves	49
2.6 Wave Packet, Phase Velocity and Group Velocity	50
2.7 Wave Function	53

2.8	Physical Interpretation of Wave Function	53
2.9	Heisenberg's Uncertainty Principle	54
2.10	Electron Diffraction Experiment	56
2.11	γ -Ray Microscope Experiment	57
2.12	Applications of Uncertainty Principle	57
2.13	One-Dimensional Time-Dependent Schrödinger Equation	60
2.14	Time Independent Schrödinger Equation	61
2.15	Motion of a Free Particle	62
2.16	Particle Trapped in One-Dimensional Infinite Potential Well	63
	<i>Summary</i>	67
	<i>Important Formulae</i>	67
	<i>Questions with Answers</i>	68
	<i>Solved Problems</i>	70
	<i>Exercise</i>	83
	<i>Unsolved Problems</i>	84
3.	Semiconductor Physics	86
3.1	Introduction	86
3.2	Classification of Semiconductors	86
3.3	Energy Level Splitting & Band Formation	88
3.4	Carrier Mobility	90
3.5	Conductivity and Drift Current Density	90
3.6	Diffusion Current Density in Semiconductors	91
3.7	Total Carrier Current Densities in p - n Junction in Equilibrium	92
3.8	Fermi-Dirac Distribution Function	93
3.9	Fermi Level in Intrinsic Semiconductors	94
3.10	Fermi Level in Extrinsic Semiconductors (Effect of Temperature on Fermi Level)	96
3.11	Effect of Impurity Concentration on Fermi Level	98
3.12	Formation of p - n Junction	99
3.13	Fermi Level in Unbiased p - n Junction	101
3.14	Fermi Level in Forward Bias p - n Junction	104
3.15	Fermi Level in Reverse Bias p - n Junction	105
3.16	Hall Effect	106
3.17	Breakdown Mechanism (Zener & Avalanche)	110
3.18	p - n Junction Diode (Rectifier Diode)	111
3.19	Light-Emitting Diode	115
3.20	Zener Diodes	118

6. Ultrasonics	201
6.1 Introduction	201
6.2 Magnetostriction Effect	201
6.3 Magnetostriction Oscillator	202
6.4 Piezoelectric Effect	203
6.5 Piezoelectric Oscillator	205
6.6 Applications of Ultrasonic Waves	206
6.7 Echo Sounding Principle	206
6.8 Non-destructive Testing (NDT)	208
6.9 Cavitation Effect	209
6.10 Ultrasonic Cleaning Applications	210
6.11 Ultrasonic Sensors	211
6.12 Industrial Applications of Ultrasonics	212
<i>Summary</i>	213
<i>Important Formulae</i>	214
<i>Questions with Answers</i>	214
<i>Solved Problems</i>	215
<i>Exercise</i>	219
Index	221

FOURTH EDITION

VOLUME 1

APPLIED PHYSICS

For the First Year Engineering Students of Four Year Degree Course (B.E./B.Tech).

Salient Features

- ▶ Each topic begins with an Introduction in a simple and easy to understand language.
- ▶ More illustrative diagrams and examples help in better understanding.
- ▶ Contains numerous solved problems along with assignment problems.
- ▶ Summary, list of formulae, questions with answers and exercise for practice is included at the end of each chapter.

Manasi Karkare is Associate Professor, Dean, First Year Engineering at SIES Graduate School of Technology, Nerul, Navi-Mumbai. She is a Gold Medalist Physics researcher and has completed 2 Research Projects in the field of Nanomaterials funded by University of Mumbai. She has published 10 research papers in international journals of repute. She has also authored books entitled *Nanotechnology: Fundamentals and Applications* and *Applied Physics-II*

Rajni Bahuguna, PhD from Bhabha Atomic Research Centre, DAE, is FE Incharge, Department of Humanities and Sciences, Thakur College of Engineering and Technology, Mumbai. She has over two decades of experience in teaching and research. Her areas of specialisation are structural refinement by neutron diffraction, ferroelectrics and conducting polymers. She has more than 30 publications in reputed journals, international and national conferences.

Engineering - Biomedical Engineering and Biomechanics
 Editors: J. Lee, M. J. Frechet, G. M. Whitesides, J. A. Hubbell, M. A. L. H. Lee

Polymer Nanocomposites In Biomedical Engineering

- Discusses the influence of preparation techniques on the properties of matrix, matrix and nanofiller films and the effect of filler size and dispersion
- Presents a thorough discussion of the physics, biology, chemistry and mechanical science behind polymer nanocomposites
- Discusses recent research on polymer nanocomposites in Biomedical Engineering
- Presents a fundamental approach towards polymers and polymer nanocomposites

This book presents a thorough discussion of the physics, biology, chemistry and medical science behind a new and important area of materials science and engineering: polymer nanocomposites. The tremendous applications of polymer nanocomposites in the biomedical field arise from their multitude of applications and their ability to satisfy the many different functional requirements for each of these applications. In the biomedical field, a polymer nanocomposite system must meet certain design and structural criteria, including biocompatibility, biodegradability, mechanical properties, and, in some cases, aesthetic demands. The content of this book builds on what has been learnt in elementary courses about synthesizing polymers, polymer nanocomposites, polymer composites, biological requirements, uses of polymer nanocomposites in medicine as well as medical devices and the major polymers involved during each application. The impact of hybrid nanofillers and synergistic composite structures which are used extensively in these growing industries in the biomedical field are also discussed. These novel materials vary from inorganic/organic reinforced nanocomposites for mechanical property improvement to peptide-based nanocomposites, with the chemistry designed to confer the extra material biocompatibility.

Engineering : Biomedical Engineering and Bioengineering

Sadasivuni, K.K., Ponnamma, D., Rajan, M., Ahmed, B., Al-Maadeed, M.A.S.A. (Eds.)

Polymer Nanocomposites in Biomedical Engineering

- Discusses the influence of preparation techniques on the generation of micro-, meso- and nanoscale fillers and the effect of filler size and dispersion
- Presents a thorough discussion of the physics, biology, chemistry and medicinal science behind polymer nanocomposites.
- Discusses recent research on polymer nanocomposites in Biomedical Engineering
- Presents a fundamental approach towards polymers and polymer composites

This book presents a thorough discussion of the physics, biology, chemistry and medicinal science behind a new and important area of materials science and engineering: polymer nanocomposites. The tremendous opportunities of polymer nanocomposites in the biomedical field arise from their multitude of applications and their ability to satisfy the vastly different functional requirements for each of these applications. In the biomedical field, a polymer nanocomposite system must meet certain design and functional criteria, including biocompatibility, biodegradability, mechanical properties, and, in some cases, aesthetic demands. The content of this book builds on what has been learnt in elementary courses about synthesising polymers, different nanoparticles, polymer composites, biomedical requirements, uses of polymer nanocomposites in medicine as well as medical devices and the major mechanisms involved during each application. The impact of hybrid nanofillers and synergistic composite mixtures which are used extensively or show promising outcomes in the biomedical field are also discussed. These novel materials vary from inorganic/ceramic-reinforced nanocomposites for mechanical property improvement to peptide-based nanomaterials, with the chemistry designed to render the entire material biocompatible.

Silver Nanoparticles and Its Polymer Nanocomposites—Synthesis, Optimization, Biomedical Usage, and Its Various Applications

Kishor Kumar Sadasivuni, Sanjita Rattan, Nadiya Waseem, Snehal Karglewar Brahmé, Subhash B. Kondawar, S. Ghosh, A. P. Das, Prilam Kisore Chakraborty, Jitdeep Adhikari, Prosenjit Saha and Payal Mazumdar

Abstract Nanomaterials have emerged as an extremely valuable asset in the world of material science. It's unique, and substantial properties turn scientist all over the world into incorporating them in various material synthesis. Composites are yet another powerful tool for the development of specific material according to our needs. Fusion of the above-mentioned two mighty tools results in birth of a whole

new domain called nanocomposites. This unit provides details about different aspects of nanomaterials, composites, and their categories. This chapter talks thoroughly about the basics behind the various synthesis process involved along with optimization of various parameters related to fabrication of such nanocomposites. Among the pool of nanocomposites, silver nanoparticles and the composites based on these particles have garnered much attention because of the striking properties of Ag nanoparticles like high electrical and thermal conductivity, chemical stability, catalytic activities, antimicrobial properties, nonlinear optical behavior, and surface-enhanced Raman scattering. Synthesis and development of AgNPs in the literature have been mentioned, and techniques have been reviewed. Detailed discussions based on each individual property have also been carried out along with exploring the applications in numerous varied fields.

Keywords Nanomaterials • Composites • Nanocomposites • Ag nanoparticles • Biomedical • Applications

1 Introduction

A "composite material" is defined as a mixture made up of materials having strikingly different physical and chemical properties on the macroscopic levels (Fadiman et al. 2018). The resultant material usually possesses properties different from those of any of their constituents. By using composites, it is possible to have properties like high strength and stiffness at high temperature, corrosion resistance, ability to withstand extreme temperature conditions, and desirable thermal expansion coefficient. Composite materials comprise of two phases: the matrix which is generally the continuous phase and the other phase(s) embedded in this matrix is known as the "reinforcement." A variety of unique combinations of these matrices (e.g., polymers, carbon, metals, and ceramics) and reinforcements (e.g., particles, fibers, and layered materials) have been employed for the synthesis of various composite and nanocomposite materials.

Quite recently, nanocomposites have garnered a lot of attention since they are nearly 1000 times tougher than their bulk counterparts. Sincere steps have been taken, and lots of work is still undertaken towards creation of controlled nanostructures using novel and innovative techniques. The field of synthesis and characterization of nanocomposites of both organic and inorganic materials is a rapidly growing area of research. The characteristic properties of nanocomposites materials synthesized depend mainly on the features of the fundamental material from where it is originating. In terms of physical properties, nanocomposites and conventional composite materials differ a lot in terms of surface area, where
